

Toxics Use Reporting Appendices

Developed in collaboration with the
Office of Technical Assistance and Technology
and the Toxics Use Reduction Institute

Contents

Appendix A: Standard Industrial Classification (SIC) Codes and North American Industry Classification System (NAICS) Codes Reportable Under the Massachusetts Toxics Use Reduction Act	1
Appendix B: Guidance for TURA Reporting and Planning for Certain Categories and Chemicals	52
Rules for Reporting Water Dissociable Nitrate Compounds Category	52
Guidance on Reporting Hexavalent Chromium (Cr(VI)) Compounds Use in Combustion and Welding Operations (Higher Hazard Substance, Effective Reporting Year 2012)	53
Guidance on Reporting Formaldehyde as Higher Hazard Substance (Effective Reporting Year 2012) and Quantifying its Use in Combustion Operations	58
Guidance on Quantifying Use and Reporting Cyanide Compounds under the Toxics Use Reduction Act	61
Guidance on Reporting Hydrofluoric Acid as a Higher Hazard Substance under the Toxics Use Reduction Act	64
Guidance for Reporting Toluene Diisocyanate (TDI) as a Higher Hazard Substance under TURA	67
Rules for Reporting the Use of Ammonia and Ammonium Hydroxide under TURA	68
<i>Guidance for TURA Reporting and Planning for Certain Metals and Metal Alloys</i>	69
Difference in TRI and TURA Reporting of Hydrochloric Acid and Sulfuric Acid	71
Rules for Reporting Glycol Ethers	72
Rules for Reporting Specifically Listed Chemicals vs. Chemical Categories	73
Guidance on Certain TURA Reportable Chemical Categories	77
Appendix C: Form S, Section 4: Toxics Use by Production Unit	86
Appendix D: Common Reporting Errors	114
Appendix E: Questions and Answers	116
Appendix F: Chemicals that Have Been Delisted Under TURA	119
Appendix G: Integral Recycling Guidance Under The Toxics Use Reduction Act	121
Appendix H: Guidance For Using TURA Production Process Codes	132
How To Use the Production Process Codes	134
TURA Production Process Codes Listing by Process Type	141
TURA Production Process Codes: Alphabetized Listing of Group 1 and 3	147
Appendix I: Production Units	160
Appendix J: Glossary of Terms	162

Appendix A: Standard Industrial Classification (SIC) Codes and North American Industry Classification System (NAICS) Codes Reportable Under the Massachusetts Toxics Use Reduction Act

SIC	SIC Title (and note)	2002 NAICS	2007 NAICS	2012 NAICS	2012 NAICS Title
1011	Iron Ores	212210	212210	212210	Iron Ore Mining
1021	Copper Ores	212234	212234	212234	Copper Ore and Nickel Ore Mining
1031	Lead and Zinc Ores	212231	212231	212231	Lead Ore and Zinc Ore Mining
1041	Gold Ores	212221	212221	212221	Gold Ore Mining
1044	Silver Ores	212222	212222	212222	Silver Ore Mining
1061	Ferroalloy Ores, Except Vanadium (nickel)	212234	212234	212234	Copper Ore and Nickel Ore Mining
1061	Ferroalloy Ores, Except Vanadium (other ferroalloys except nickel)	212299	212299	212299	All Other Metal Ore Mining
1081	Metal Mining Services (except site preparation and related activities performed on a contract or fee basis and geophysical surveying and mapping)	213114	213114	213114	Support Activities for Metal Mining
1081	Metal Mining Services (site preparation and related construction activities on a contract basis)	238910	238910	238910	Site Preparation Contractors
1081	Metal Mining Services (geophysical surveying and mapping)	541360	541360	541360	Geophysical Surveying and Mapping Services
1094	Uranium-Radium-Vanadium Ores	212291	212291	212291	Uranium-Radium-Vanadium Ore Mining
1099	Miscellaneous Metal Ores, NEC	212299	212299	212299	All Other Metal Ore Mining
1221	Bituminous Coal and Lignite Surface Mining	212111	212111	212111	Bituminous Coal and Lignite Surface Mining
1222	Bituminous Coal Underground Mining	212112	212112	212112	Bituminous Coal Underground Mining
1231	Anthracite Mining	212113	212113	212113	Anthracite Mining
1241	Coal Mining Services (except site preparation and related construction activities on a contract basis)	213113	213113	213113	Support Activities for Coal Mining
1241	Coal Mining Services (site preparation and related construction activities on a contract basis)	238910	238910	238910	Site Preparation Contractors
1311	Crude Petroleum and Natural Gas	211111	211111	211111	Crude Petroleum and Natural Gas Extraction
1321	Natural Gas Liquids	211112	211112	211112	Natural Gas Liquid Extraction
1381	Drilling Oil and Gas Wells	213111	213111	213111	Drilling Oil and Gas Wells
1382	Oil and Gas Field Exploration Services (except geophysical mapping and surveying)	213112	213112	213112	Support Activities for Oil and Gas Operations
1382	Oil and Gas Field Exploration Services (geophysical surveying and mapping)	541360	541360	541360	Geophysical Surveying and Mapping Services
1389	Oil and Gas Field Services, NEC (except construction of field gathering lines, site preparation and related construction activities performed on a contract or fee basis)	213112	213112	213112	Support Activities for Oil and Gas Operations
1389	Oil and Gas Field Services, NEC (construction of field gathering lines on a contract or fee basis)	237120	237120	237120	Oil and Gas Pipeline and Related Structures Construction
1389	Oil and Gas Field Services, NEC (site preparation and related construction activities on a contract basis)	238910	238910	238910	Site Preparation Contractors
1411	Dimension Stone	212311	212311	212311	Dimension Stone Mining and Quarrying
1422	Crushed and Broken Limestone	212312	212312	212312	Crushed and Broken Limestone Mining and Quarrying
1423	Crushed and Broken Granite	212313	212313	212313	Crushed and Broken Granite Mining and Quarrying
1429	Crushed and Broken Stone, NEC	212319	212319	212319	Other Crushed and Broken Stone Mining and Quarrying
1442	Construction Sand and Gravel	212321	212321	212321	Construction Sand and Gravel Mining
1446	Industrial Sand	212322	212322	212322	Industrial Sand Mining

SIC	SIC Title (and note)	2002 NAICS	2007 NAICS	2012 NAICS	2012 NAICS Title
1455	Kaolin and Ball Clay	212324	212324	212324	Kaolin and Ball Clay Mining
1459	Clay, Ceramic, and Refractory Minerals, NEC	212325	212325	212325	Clay and Ceramic and Refractory Minerals Mining
1474	Potash, Soda, and Borate Minerals	212391	212391	212391	Potash, Soda, and Borate Mineral Mining
1475	Phosphate Rock	212392	212392	212392	Phosphate Rock Mining
1479	Chemical and Fertilizer Mineral Mining, NEC	212393	212393	212393	Other Chemical and Fertilizer Mineral Mining
1481	Nonmetallic Minerals Services, Except Fuels (except geophysical surveying and mapping and site preparation and related construction activities performed on a contract or fee basis)	213115	213115	213115	Support Activities for Nonmetallic Minerals (except Fuels) Mining
1481	Nonmetallic Minerals Services, Except Fuels (site preparation and related construction activities on a contract basis)	238910	238910	238910	Site Preparation Contractors
1481	Nonmetallic Minerals Services, Except Fuels (geophysical surveying and mapping)	541360	541360	541360	Geophysical Surveying and Mapping Services
1499	Miscellaneous Nonmetallic Minerals, Except Fuels (bituminous limestone and bituminous sandstone)	212319	212319	212319	Other Crushed and Broken Stone Mining and Quarrying
1499	Miscellaneous Nonmetallic Minerals, Except Fuels (except bituminous limestone and bituminous sandstone)	212399	212399	212399	All Other Nonmetallic Mineral Mining
2011	Meat Packing Plants	311611	311611	311611	Animal (except Poultry) Slaughtering
2013	Sausages and Other Prepared Meat Products (except lard made from purchased materials)	311612	311612	311612	Meat Processed from Carcasses
2013	Sausages and Other Prepared Meat Products (lard made from purchased materials)	311613	311613	311613	Rendering and Meat Byproduct Processing
2015	Poultry Slaughtering and Processing (poultry slaughtering and processing)	311615	311615	311615	Poultry Processing
2015	Poultry Slaughtering and Processing (egg processing)	311999	311999	311999	All Other Miscellaneous Food Manufacturing
2021	Creamery Butter	311512	311512	311512	Creamery Butter Manufacturing
2022	Natural, Processed, and Imitation Cheese	311513	311513	311513	Cheese Manufacturing
2023	Dry, Condensed and Evaporated Dairy Products (liquid non-dairy creamer)	311511	311511	311511	Fluid Milk Manufacturing
2023	Dry, Condensed and Evaporated Dairy Products (except liquid non-dairy creamer)	311514	311514	311514	Dry, Condensed, and Evaporated Dairy Product Manufacturing
2024	Ice Cream and Frozen Desserts	311520	311520	311520	Ice Cream and Frozen Dessert Manufacturing
2026	Fluid Milk (except ultra-high temperature)	311511	311511	311511	Fluid Milk Manufacturing
2026	Fluid Milk (ultra-high temperature)	311514	311514	311514	Dry, Condensed, and Evaporated Dairy Product Manufacturing
2032	Canned Specialties (except canned puddings)	311422	311422	311422	Specialty Canning
2032	Canned Specialties (canned puddings)	311999	311999	311999	All Other Miscellaneous Food Manufacturing
2033	Canned Fruits, Vegetables, Preserves, Jams, and Jellies	311421	311421	311421	Fruit and Vegetable Canning
2034	Dried and Dehydrated Fruits, Vegetables and Soup Mixes (vegetable flour)	311211	311211	311211	Flour Milling
2034	Dried and Dehydrated Fruits, Vegetables and Soup Mixes (except vegetable flour and soup mixes made from purchased dried and dehydrated ingredients)	311423	311423	311423	Dried and Dehydrated Food Manufacturing
2034	Dried and Dehydrated Fruits, Vegetables, and Soup Mixes (soup mixes made from purchased dehydrated ingredients)	311999	311999	311999	All Other Miscellaneous Food Manufacturing
2035	Pickled Fruits and Vegetables, Vegetable Sauces and Seasonings, and Salad Dressings (pickled fruits and vegetables)	311421	311421	311421	Fruit and Vegetable Canning
2035	Pickled Fruits and Vegetables, Vegetable Sauces and Seasonings, and Salad Dressings (sauces and salad dressings)	311941	311941	311941	Mayonnaise, Dressing, and Other Prepared Sauce Manufacturing
2037	Frozen Fruits, Fruit Juices, and Vegetables	311411	311411	311411	Frozen Fruit, Juice, and Vegetable Manufacturing
2038	Frozen Specialties, NEC	311412	311412	311412	Frozen Specialty Food Manufacturing

SIC	SIC Title (and note)	2002 NAICS	2007 NAICS	2012 NAICS	2012 NAICS Title
2041	Flour and Other Grain Mill Products	311211	311211	311211	Flour Milling
2043	Cereal Breakfast Foods (cereal breakfast foods and related preparations except grain based coffee substitutes)	311230	311230	311230	Breakfast Cereal Manufacturing
2043	Cereal Breakfast Foods (grain based coffee substitutes)	311920	311920	311920	Coffee and Tea Manufacturing
2044	Rice Milling	311212	311212	311212	Rice Milling
2045	Prepared Flour Mixes and Doughs	311822	311822	311824	Dry Pasta, Dough, and Flour Mixes Manufacturing from Purchased Flour
2046	Wet Corn Milling (except refining purchased corn oil)	311221	311221	311221	Wet Corn Milling
2046	Wet Corn Milling (refining purchased corn oil)	311225	311225	311225	Fats and Oils Refining and Blending
2047	Dog and Cat Food	311111	311111	311111	Dog and Cat Food Manufacturing
2048	Prepared Feeds and Feed Ingredients for Animals and Fowls, Except Dogs and Cats (except slaughtering animals for pet food)	311119	311119	311119	Other Animal Food Manufacturing
2048	Prepared Feeds and Feed Ingredients for Animals and Fowls, Except Dogs and Cats (slaughtering animals for pet food)	311611	311611	311611	Animal (except Poultry) Slaughtering
2051	Bread and Other Bakery Products, Except Cookies and Crackers	311812	311812	311812	Commercial Bakeries
2052	Cookies and Crackers (unleavened bread and soft pretzels)	311812	311812	311812	Commercial Bakeries
2052	Cookies and Crackers (except unleavened bread and pretzels)	311821	311821	311821	Cookie and Cracker Manufacturing
2052	Cookies and Crackers (hard pretzels and snack pretzels, except soft)	311919	311919	311919	Other Snack Food Manufacturing
2053	Frozen Bakery Products, Except Bread	311813	311813	311813	Frozen Cakes, Pies, and Other Pastries Manufacturing
2061	Cane Sugar, Except Refining	311311	311311	311314	Cane Sugar Manufacturing
2062	Cane Sugar Refining	311312	311312	311314	Cane Sugar Manufacturing
2063	Beet Sugar	311313	311313	311313	Beet Sugar Manufacturing
2064	Candy and Other Confectionery Products (chocolate confectionery)	311330	311330	311352	Confectionery Manufacturing from Purchased Chocolate
2064	Candy and Other Confectionery Products (nonchocolate confectionery)	311340	311340	311340	Nonchocolate Confectionery Manufacturing
2066	Chocolate and Cocoa Products (except chocolate products, made from purchased chocolate)	311320	311320	311351	Chocolate and Confectionery Manufacturing from Cacao Beans
2066	Chocolate and Cocoa Products (chocolate products made from purchased chocolate)	311330	311330	311352	Confectionery Manufacturing from Purchased Chocolate
2067	Chewing Gum	311340	311340	311340	Nonchocolate Confectionery Manufacturing
2068	Salted and Roasted Nuts and Seeds	311911	311911	311911	Roasted Nuts and Peanut Butter Manufacturing
2074	Cottonseed Oil Mills (cottonseed processing)	311223	311223	311224	Soybean and Other Oilseed Processing
2074	Cottonseed Oil Mills (processing purchased cottonseed oil)	311225	311225	311225	Fats and Oils Refining and Blending
2075	Soybean Oil Mills (soybean processing, except edible soybean oil)	311222	311222	311224	Soybean and Other Oilseed Processing
2075	Soybean Oil Mills (processing purchased soybean oil)	311225	311225	311225	Fats and Oils Refining and Blending
2076	Vegetable Oil Mills, Except Corn, Cottonseed, and Soybean (oilseed processing)	311223	311223	311224	Soybean and Other Oilseed Processing
2076	Vegetable Oil Mills, Except Corn, Cottonseed, and Soybean (processing purchased vegetable and oilseed oils)	311225	311225	311225	Fats and Oils Refining and Blending
2077	Animal and Marine Fats and Oils (animal fats and oils)	311613	311613	311613	Rendering and Meat Byproduct Processing
2077	Animal and Marine Fats and Oils (canned marine fats and oils)	311711	311711	311710	Seafood Product Preparation and Packaging
2077	Animal and Marine Fats and Oils (fresh and frozen marine fats and oils)	311712	311712	311710	Seafood Product Preparation and Packaging
2079	Shortening, Table Oils, Margarine, and Other Edible Fats and Oils, NEC (processing soybean oil into edible cooking oils from soybeans crushed in the same establishment)	311222	311222	311224	Soybean and Other Oilseed Processing

SIC	SIC Title (and note)	2002 NAICS	2007 NAICS	2012 NAICS	2012 NAICS Title
2079	Shortening, Table Oils, Margarine and Other Edible Fats and Oils, NEC (processing vegetable oils, except soybean, into edible cooking oils from oilseeds and vegetables crushed in the same establishment)	311223	311223	311224	Soybean and Other Oilseed Processing
2079	Shortening, Table Oils, Margarine, and Other Edible Fats and Oils, NEC (except processing vegetable and soybean oils into edible oils from oilseeds and vegetables crushed in the same establishment)	311225	311225	311225	Fats and Oils Refining and Blending
2082	Malt Beverages (malt extract)	311942	311942	311942	Spice and Extract Manufacturing
2082	Malt Beverages (except malt extract)	312120	312120	312120	Breweries
2083	Malt	311213	311213	311213	Malt Manufacturing
2084	Wines, Brandy, and Brandy Spirits	312130	312130	312130	Wineries
2085	Distilled and Blended Liquors (apple jack)	312130	312130	312130	Wineries
2085	Distilled and Blended Liquors (except apple jack)	312140	312140	312140	Distilleries
2086	Bottled and Canned Soft Drinks and Carbonated Water (except bottled water)	312111	312111	312111	Soft Drink Manufacturing
2086	Bottled and Canned Soft Drinks and Carbonated Water (bottled water)	312112	312112	312112	Bottled Water Manufacturing
2087	Flavoring Extracts and Flavoring Syrups, NEC (coffee flavoring and syrups)	311920	311920	311920	Coffee and Tea Manufacturing
2087	Flavoring Extracts and Flavoring Syrups, NEC (flavoring syrups and concentrates except coffee)	311930	311930	311930	Flavoring Syrup and Concentrate Manufacturing
2087	Flavoring Extracts and Flavoring Syrups, NEC (flavoring extracts and natural food colorings)	311942	311942	311942	Spice and Extract Manufacturing
2087	Flavoring Extracts and Flavoring Syrups, NEC (powered drink mix)	311999	311999	311999	All Other Miscellaneous Food Manufacturing
2091	Canned and Cured Fish and Seafoods	311711	311711	311710	Seafood Product Preparation and Packaging
2092	Prepared Fresh or Frozen Fish and Seafoods	311712	311712	311710	Seafood Product Preparation and Packaging
2095	Roasted Coffee	311920	311920	311920	Coffee and Tea Manufacturing
2096	Potato Chips, Corn Chips, and Similar Snacks	311919	311919	311919	Other Snack Food Manufacturing
2097	Manufactured Ice	312113	312113	312113	Ice Manufacturing
2098	Macaroni, Spaghetti, Vermicelli and Noodles	311823	311823	311824	Dry Pasta, Dough, and Flour Mixes Manufacturing from Purchased Flour
2099	Food Preparations, NEC (reducing maple sap to maple syrup)	111998	111998	111998	All Other Miscellaneous Crop Farming
2099	Food Preparations, NEC (reducing maple sap to maple syrup)	111998	112519	112519	Other Aquaculture
2099	Food Preparations, NEC (rice, uncooked and packaged with other ingredients made in rice mills)	311212	311212	311212	Rice Milling
2099	Food Preparations, NEC (marshmallow creme)	311340	311340	311340	Nonchocolate Confectionery Manufacturing
2099	Food Preparations, NEC (bouillon and potatoes dried and packaged with other ingredients produced in dehydrating plants)	311423	311423	311423	Dried and Dehydrated Food Manufacturing
2099	Food Preparations, NEC (dry pasta packaged with other ingredients made in dry pasta plants)	311823	311823	311824	Dry Pasta, Dough, and Flour Mixes Manufacturing from Purchased Flour
2099	Food Preparations, NEC (tortillas)	311830	311830	311830	Tortilla Manufacturing
2099	Food Preparations, NEC (peanut butter)	311911	311911	311911	Roasted Nuts and Peanut Butter Manufacturing
2099	Food Preparations, NEC (tea)	311920	311920	311920	Coffee and Tea Manufacturing
2099	Food Preparations, NEC (vinegar, prepared dip)	311941	311941	311941	Mayonnaise, Dressing, and Other Prepared Sauce Manufacturing
2099	Food Preparations, NEC (spices, dry dip mix, dry salad dressing mix, and seasoning mix)	311942	311942	311942	Spice and Extract Manufacturing
2099	Food Preparations, NEC (perishable prepared food)	311991	311991	311991	Perishable Prepared Food Manufacturing

SIC	SIC Title (and note)	2002 NAICS	2007 NAICS	2012 NAICS	2012 NAICS Title
2099	Food Preparations, NEC (except bouillon, marshmallow creme, spices, peanut butter, perishable prepared foods, tortillas, tea and tea extracts, dry dip mix, prepared dips, dry salad dressing mix, seasoning mix, dried potatoes, pasta, and rice mixed with ot	311999	311999	311999	All Other Miscellaneous Food Manufacturing
2111	Cigarettes	312221	312221	312230	Tobacco Manufacturing
2121	Cigars	312229	312229	312230	Tobacco Manufacturing
2131	Chewing and Smoking Tobacco and Snuff	312229	312229	312230	Tobacco Manufacturing
2141	Tobacco Stemming and Redrying (stemming and redrying tobacco)	312210	312210	312230	Tobacco Manufacturing
2141	Tobacco Stemming and Redrying (reconstituted tobacco)	312229	312229	312230	Tobacco Manufacturing
2211	Broadwoven Fabric Mills, Cotton	313210	313210	313210	Broadwoven Fabric Mills
2221	Broadwoven Fabric Mills, Manmade Fiber and Silk	313210	313210	313210	Broadwoven Fabric Mills
2231	Broadwoven Fabric Mills, Wool (Including Dyeing and Finishing) (except finishing wool fabric without weaving wool fabric)	313210	313210	313210	Broadwoven Fabric Mills
2231	Broadwoven Fabric Mills, Wool (wool broadwoven fabric finishing without weaving fabric)	313311	313311	313310	Textile and Fabric Finishing Mills
2231	Broadwoven Fabric Mills, Wool (wool fabric, except broadwoven, finishing without weaving fabric)	313312	313312	313310	Textile and Fabric Finishing Mills
2241	Narrow Fabric and Other Smallware Mills: Cotton, Wool, Silk and Manmade Fiber	313221	313221	313220	Narrow Fabric Mills and Schiffli Machine Embroidery
2251	Women's Full-Length and Knee-Length Hosiery, Except Socks (dyeing and finishing sheer hosiery without knitting sheer hosiery)	313312	313312	313310	Textile and Fabric Finishing Mills
2251	Women's Full-Length and Knee-Length Hosiery, Except Socks (except dyeing and finishing sheer hosiery without knitting sheer hosiery)	315111	315111	315110	Hosiery and Sock Mills
2252	Hosiery, NEC (dyeing and finishing hosiery , except sheer, without knitting hosiery)	313312	313312	313310	Textile and Fabric Finishing Mills
2252	Hosiery, NEC (girls' full length and knee length sheer hosiery)	315111	315111	315110	Hosiery and Sock Mills
2252	Hosiery, NEC (except girls' full-length and knee-length sheer hosiery and dyeing and finishing hosiery without knitting hosiery)	315119	315119	315110	Hosiery and Sock Mills
2253	Knit Outerwear Mills (dyeing and finishing knit outerwear without knitting outerwear)	313312	313312	313310	Textile and Fabric Finishing Mills
2253	Knit Outerwear Mills (except bath and lounging robes and dying and finish without knitting garments)	315191	315191	315190	Other Apparel Knitting Mills
2253	Knit Outerwear Mills (knitting bath or lounging robes)	315192	315192	315190	Other Apparel Knitting Mills
2254	Knit Underwear and Nightwear Mills (dyeing and finishing underwear and nightwear without knitting garments)	313312	313312	313310	Textile and Fabric Finishing Mills
2254	Knit Underwear and Nightwear Mills (except dyeing and finishing underwear and nightwear without knitting garments)	315192	315192	315190	Other Apparel Knitting Mills
2257	Weft Knit Fabric Mills (except finishing without knitting weft fabric)	313241	313241	313240	Knit Fabric Mills
2257	Weft Knit Fabric Mills (finishing weft fabric without knitting weft fabric)	313312	313312	313310	Textile and Fabric Finishing Mills
2258	Lace and Warp Knit Fabric Mills (except finishing lace or warp fabric without knitting lace or warp fabric)	313249	313249	313240	Knit Fabric Mills

Appendix B: Guidance for TURA Reporting and Planning for Certain Categories and Chemicals

Rules for Reporting Water Dissociable Nitrate Compounds Category

The 2000 EPA TRI guidance document, "List of Toxic Chemicals within the Water Dissociable Nitrate Compounds Category and Guidance for Reporting" (EPA 745-R-00-006), provides a detailed description of how to report this chemical category on Form R. Additional information on reporting nitrate compounds for the neutralization of nitric acid can be found in the fact sheet "Reporting Water Dissociable Nitrates" produced by the Office of Technical Assistance (<https://www.mass.gov/media/1314831>). The following general overview is from the EPA guidance document:

"Chemicals within the nitrate compounds category are only reportable when in aqueous solution. All water dissociable nitrate compounds are included in the nitrate compounds category, including ammonium nitrate. Specifically listed section 313 chemicals *are not* included in threshold determinations for chemical categories such as the water dissociable nitrate compounds category. Specifically listed toxic chemicals are subject to their own individual threshold determinations. As of December 1, 1994, ammonium nitrate (solution) is not an individually listed chemical on the EPCRA section 313 list. However, ammonium nitrate is still subject to reporting under the nitrate compounds category. In addition, the aqueous ammonia from the dissociation of ammonium nitrate when in aqueous solution is subject to reporting under the ammonia listing."

Determining Threshold Quantities for Nitrate Compounds

The total nitrate compound, including **both** the nitrate ion portion and the counterion, is included in the nitrate compounds category. When determining threshold amounts, the **total** weight of the nitrate compound is to be included in all calculations.

If a facility treats wastewater on-site biologically, using the activated sludge process, for example, the facility may be generating nitrate compounds as a result of this biological process. The nitrate ion generated from this process will be associated with various counterions (e.g. sodium ion, potassium ion). In the absence of information on the identity of the counterion, a facility should assume for the purposes of TURA threshold determinations that the counterion is sodium ion.

Determining Byproduct Quantities for Nitrate Compounds

Only the nitrate ion (NO₃) portion of nitrate compounds is to be included when determining the amount of the chemicals within the nitrate compounds category that are generated as byproduct. Since some of the nitrate compounds generated by a process may also be destroyed in that process (e.g., biological wastewater treatment), the quantity of byproduct is equivalent to the sum of Part II, Sections 8.1 through 8.8 **minus** Section 8.6 (quantity treated onsite) of the EPA Form R.

Example

- Threshold determination -

In a calendar year, a facility coincidentally manufactures 20,000 pounds of sodium nitrate and 10,000 pounds of calcium nitrate, both in aqueous solutions, and releases these solutions to wastewater streams. The total quantity of nitrate compounds manufactured by the facility is the sum of the two chemicals, or 30,000 pounds, which exceeds the manufacturing threshold quantity of 25,000 pounds. The facility, therefore, is required to report 30,000 pounds for the nitrate compounds category.

- Byproduct determination -

By weight, the nitrate ion portion is 72.96 percent of sodium nitrate and is 75.57 percent of calcium nitrate. Of the 20,000 pounds of the sodium nitrate in solution, 72.96 percent or 14,592 pounds is nitrate ion, and similarly, of the 10,000 pounds of the calcium nitrate in solution, 75.57 percent or 7,557 pounds is nitrate ion. The total nitrate ion in aqueous solution generated as byproduct by the facility is the sum of the nitrate ion in the two solutions, or 22,149 pounds.

Guidance on Reporting Hexavalent Chromium (Cr(VI)) Compounds Use in Combustion and Welding Operations (Higher Hazard Substance, Effective Reporting Year 2012)

There are changes to the requirements for submitting Chromium compounds under Massachusetts Department of Environmental Protection (MassDEP) Toxics Use Reduction (TURA) Form S reports due on July 1, 2013 covering reporting year 2012. This document explains the new reporting requirements and mechanics and provides guidance on determining if combustion activities at your facility are likely to trip the reporting thresholds.

1. Higher Hazard Designation for Hexavalent Chromium (Cr(VI))

As of reporting year 2012: hexavalent chromium (Cr(VI)) compounds have been split off from all Chromium compounds, and designated as a higher hazard substance. This has the following implications.

REPORTING THRESHOLD REDUCED TO 1000 Cr(VI) Compounds:

Designation as a higher hazard substance lowers the reporting threshold from the current threshold of 25,000 pounds if the substance is manufactured or processed or 10,000 pounds if the substance is otherwise used to 1000 pounds. A Form S report is required for each higher hazard substance manufactured OR processed OR otherwise used at 1000 or more pounds in a calendar year. Note that these three types of use are NOT additive for the purposes of determining whether the threshold has been exceeded. For example, a facility that manufactured 700 pounds and otherwise used 350 pounds of formaldehyde would not be required to submit a Form S report on the substance, since neither type of use exceeded 1000 pounds.

Non-Cr(VI) chromium compounds are still reportable as the chromium compounds category under the original TURA reporting thresholds (25,000 pounds if manufactured, 25,000 pounds if processed, or 10,000 pounds if otherwise used).

NEW DEP CHEMICAL CATEGORY NUMBERS ASSIGNED FOR CHROMIUM COMPOUNDS

Every chemical category has to have a unique identifier in order to collect the chemical data. As a result new category numbers were created for the two new Chromium categories

1. Use DEP Category # 1216 for Cr (VI) compounds
 - Use DEP Category # 1217 for Non Cr(VI) Chromium Compounds

STATE ONLY FORM Rs ARE REQUIRED FOR Cr(VI), and CHROMIUM COMPOUNDS EXCLUDING CR(VI)

Designation as a higher hazard substance changes the mechanics of reporting Form R information to the MassDEP Toxics Use Reduction Program and to Environmental Protection Agency (EPA) Toxics Release Inventory (TRI). The TURA system will automatically generate State Only Form Rs for all substances for which the TURA reporting threshold is lower than the EPA Toxics Release Inventory threshold, and for all substances which have different “qualifiers” under the TURA and TRI systems. Therefore facilities will need to:

- Complete the “State Only Form R” for, Cr(VI) Compounds and Chromium Compounds excluding Cr(VI).
- Submit a separate Form R to the EPA TRI program for Chromium compounds. Note that the Chromium Compounds Form R submitted to EPA will cover ALL Chromium Compounds.

2. What are some examples of hexavalent chromium compounds?

Hexavalent chromium compounds are any chromium compounds in the +6 valence state. This includes, but is not limited to, the following compounds:

7789-98-9	Ammonium Chromate
7789-09-5	Ammonium Dichromate
10294-40-3	Barium Chromate
1189-85-1	tert-Butyl Chromate
13765-19-0	Calcium Chromate
14986-48-2	Chromium (VI) chloride
1333-82-0	Chromium (VI) Trioxide
18540-29-9	Hexavalent Chromium
7758-97-6	Lead Chromate
18454-12-1	Lead Chromate Oxide
1344-38-3	Basic Lead Chromate Orange
7789-00-6	Potassium Chromate
7778-50-9	Potassium Dichromate
7784-01-2	Silver Chromate
7775-11-3	Sodium Chromate
10588-01-9	Sodium Dichromate
7789-12-0	Sodium Dichromate Dehydrate
7789-06-2	Strontium Chromate
13530-65-9	Zinc Chromate
14018-95-2	Zinc Dichromate ¹
7738-94-5	Chromic Acid

3. How are Chromium Compounds Used?

Industrial uses of hexavalent chromium compounds include chromate pigments in dyes, paints, inks, and plastics; chromates added as anticorrosive agents to paints, primers, and other surface coatings; and chromic acid electroplated onto metal parts to provide a decorative or protective coating.²

Cr(VI) Compounds can also be coincidentally manufactured during the consumption of fuel or when performing hot work" such as welding on stainless steel or melting chromium metal. In these situations the chromium is not originally hexavalent, but the high temperatures involved in the process result in oxidation that converts the chromium to a hexavalent state.³ Filers using chromium compounds of any kind should consider whether they are being used in an oxidating environment and thus could be generating hexavalent chromium compounds.

Chromium may also be coincidentally manufactured during the combustion of fuel.

Note that the information that follows is provided for general guidance – facilities are required to use the best readily available data applicable to their operations for threshold determinations.

Cr(VI) USE IN COMBUSTION PROCESSES

¹ http://www.osha.gov/dts/chemicalsampling/data/CH_228697.html

² <http://www.osha.gov/SLTC/hexavalentchromium/index.html>

³ <http://www.osha.gov/SLTC/hexavalentchromium/index.html>

Manufacturing: Facilities will likely coincidentally manufacture Cr(VI) Compounds through combustion and flue gas desulfurization in sufficient quantities to trip the 1,000 pound reporting threshold. In general, the quantities of Cr(VI) compounds and formaldehyde manufactured, processed, or otherwise used at a facility will be dependent on a number of factors, including the type of fuel combusted (coal, oil, gas), the type of combustor, and combustion conditions (e.g., temperature, air/fuel ratio). Information that can be used to estimate the coincidental manufacture of Cr(VI) Compounds during combustion can be found in the references cited at the end of this document.

Processing: “Processing” means preparing a TURA reportable chemical or a mixture or other trade name product containing a TURA reportable chemical for distribution in commerce. Chromium compounds in fly ash and ash from coal- and oil-fired facilities are likely to include Cr(VI) compounds. Any fly ash that is shipped off site for use or recycling by another facility is being “processed” and unless the *de minimis* exemption applies, the Cr(VI) compounds in the ash must be counted toward the 1000 pound “processing” threshold. (Note however that any ash recovered for use onsite the material has NOT been prepared for distribution in commerce and thus is not counted toward the processing threshold.)

The *de minimis* exemption applies to toxic substances that are contained in materials distributed in commerce offsite for direct use or reuse. A material is considered to be transferred offsite for direct reuse if the materials will be directly used in an operation or application without any recovery or other extraction of contaminants. Toxic substances that are present in a material below the *de minimis* concentration are not counted toward the 1000 pound “processing” threshold.

For example; ash sent off-site for concrete manufacturing is a ‘direct reuse’. The *de minimis* concentration for Cr(VI) compounds and formaldehyde is 0.1 percent. Therefore if the ash being sent off for direct reuse in concrete manufacture is less than 0.1 % Cr(VI) Compounds, the Cr(VI) Compounds in the ash does not need to be counted toward the 1000 pound “processing” threshold. If the concentration is >0.1%, then the entire amount of Cr(VI) Compounds in the ash must be counted toward the 1000 pound “processing” threshold.

Because transfers offsite for recycling must undergo a subsequent recovery step, the material to be recycled is considered a waste and is not eligible for the *de minimis* exemption. All Cr(VI) contained in such materials must be counted toward the processing threshold, regardless of its concentration.

Otherwise Use: A substance is “otherwise used” in a production process if it is neither manufactured nor incorporated into the final product. Therefore any contaminants contained in fuel are considered “otherwise used” in the combustion process. The *de minimis* concentration applies to materials that are otherwise used. Materials below the *de minimis* concentrations (0.1 % for Cr (VI) Compounds and for formaldehyde) do not need to be counted toward the 1000 pound “otherwise use” threshold. However the entire quantity of substances that are present in concentrations above the *de minimis* level must be counted toward the 1000 pound “otherwise use” threshold

- Cr(VI) Compounds in fuel : Unless a facility has information indicating otherwise, they may assume that Cr(VI) compounds in coal and distillate oil are below *de minimis* levels.
- **Cr(VI) compounds in ash or other wastes that are received from off-site and disposed, stabilized (without subsequent distribution in commerce), or treated for destruction on-site.** These materials are “wastes” and as such are not subject to the *de minimis* exemption. Facilities engaged in these operations must count the entire amount of Cr(VI) Compounds in the ash toward the 1000 pound “otherwise use” threshold.

REFERENCES FOR QUANTIFYING Cr(VI) CONCENTRATIONS IN FUEL, EMISSIONS, AND ASH.

It is the responsibility of each facility to determine the best readily available data applicable to their operations. The methods and sources of data for quantifying Cr(VI) compounds use include, but are not limited to, the following –

1. Fuel-specific data for the fuels combusted (e.g., obtained from supplier).
2. Facility-specific monitoring data and/or emission factors.
3. Facility-specific waste (e.g., ash) sampling data – the literature contains a number of studies and other information sources that show that the fly ash from coal- and oil-fired facilities is likely to contain Cr(VI) compounds. Among these references are –
 - a. Cr(VI) speciation data for ash from coal- and oil-fired electric generation facilities discussed in EPA’s *National Emission Standards for Hazardous Air Pollutants from Coal- and Oil-fired Electric Utility Steam Generating Units and Standards of Performance for Fossil-Fuel-Fired Electric Utility, Industrial-Commercial-Institutional, and Small Industrial-Commercial-Institutional Steam Generating Units – Panel Report*, pp. 70 – 76, 2/16/11. (<https://www.epa.gov/reg-flex/sbar-panel-national-emission-standards-hazardous-air-pollutants-neshap-coal-and-oil-fired>).

 - c. *Chromium Speciation in Coal and Biomass Co-Combustion Products*, Arthur F. Stam, Ruud Meij, Henk te Winkel, Ronald J. van Eijk, Frank E. Huggins, Gerrit Brem, **Environ. Sci. Technol.**, **2011**, 45 (6), 2450-2456.
4. For EPRI members – the PISCES database (provides emission factors and models to calculate air emissions), and Toxics Release Inventory for Power Plants (TRIPP) software.
5. EPA’s *EPCRA Section 313 Industry Guidance – Electricity Generating Facilities*.
6. EPA emission factors from EPA’s *Compilation of Air Pollutant Emission Factors (AP-42)*, 5th ed. - *Chapter 1, External Combustion Sources*. These factors are based on a limited number of samples and may not reflect more accurate information available to the facility for the particular type of fuel combusted and pollution control devices used.

Cr(VI) USE IN WELDING:

Emission Factors

The following emission factors were reported in the literature. For more information on electrode types, rod diameters, test conditions and analytical methods, please see the appropriate reference.

Welding process and electrode	Heung, et al Cr(VI) (g/kg)	EPA HAP Emission Factors (AP-42) Cr(VI)(g/kg)	
SMAW - E316L	0.179	0.332	
SMAW – E310L	n/a	1.88	
SMAW – E308	n/a	0.359	
GMAW – ER316	0.0194	0.01	
FCAW with shield gas – E309LT	0.0146	n/a	
FCAW without shield gas – E309LT	0.2557	n/a	

FCAW - E316	n/a	0.14	
-------------	-----	------	--

SMAW - Shielded Metal Arc Welding
GMAW – Gas-Metal Arc Welding
FCAW – Flux-Cored Arc Welding

Calculating quantities of hexavalent chromium compounds manufactured during welding operations to determine if 1000 lb reporting threshold is exceeded:

Threshold for TURA reporting and planning: 1000 lb hexavalent chromium compounds

Total lbs of electrode used x emission factor (lbs Cr(VI)/ 1000 lbs electrode) = lbs Cr(VI)

If assume that all Cr(VI) compounds are CrO₃, (particulate Cr compounds are typically oxides and halides) then compounds would be approximately twice the weight of the Cr(VI) (Cr = 52, O₃ = 48). Estimate 520 lb threshold for Cr(VI) as HHS.

e.g.,for largest emission factor – SMAW- E310L, 1.88 lb/1000 lbs:

520 lb Cr(VI) = (1.88 lbs/1000 lbs) x electrode used (lbs)

Electrode use to reach 500 lb Cr(VI) manufactured during welding = 277,000 lbs

Guidance on Reporting Formaldehyde as Higher Hazard Substance (Effective Reporting Year 2012) and Quantifying its Use in Combustion Operations

There are changes to the requirements for submitting Formaldehyde under Massachusetts Department of Environmental Protection (MassDEP) Toxics Use Reduction (TURA) Form S reports due on July 1, 2013 covering reporting year 2012. This document explains the new reporting requirements and mechanics and provides guidance on determining if combustion activities at your facility are likely to trip the reporting thresholds.

4. Higher Hazard Designation

As of reporting year 2012 formaldehyde has been designated as a higher hazard substance with the following implications for reporting.

REPORTING THRESHOLD REDUCED TO 1000 POUNDS

Designation as a higher hazard substance lowers the reporting threshold from the current threshold of 25,000 pounds if the substance is manufactured or processed or 10,000 pounds if the substance is otherwise used to 1000 pounds. A Form S report is required for each higher hazard substance manufactured OR processed OR otherwise used at 1000 or more pounds in a calendar year. Note that these three types of use are NOT additive for the purposes of determining whether the threshold has been exceeded. For example, a facility that manufactured 700 pounds and otherwise used 350 pounds of formaldehyde would not be required to submit a Form S report on the substance, since neither type of use exceeded 1000 pounds.

STATE ONLY FORM Rs ARE REQUIRED FOR FORMALDEYDE

Designation as a higher hazard substance changes the mechanics of reporting Form R information to the MassDEP Toxics Use Reduction Program and to Environmental Protection Agency (EPA) Toxics Release Inventory (TRI). The TURA system will automatically generate State Only Form Rs for all substances for which the TURA reporting threshold is lower than the EPA Toxics Release Inventory threshold, and for all substances which have different “qualifiers” under the TURA and TRI systems. Therefore facilities will need to:

- Complete the “State Only Form R” for formaldehyde
- Submit a separate Form R to the EPA TRI program

5. What are Common Synonyms for formaldehyde

Formaldehyde (CAS#50-00-0) has several synonyms, including:

Formalin
Formol
Methylene Glycol
Methyl Aldehyde
Methylene Oxide

6. How Is Formaldehyde Commonly Used?

Formaldehyde is primarily used in the manufacture of wood adhesives applied to plywood, particleboard and other manufactured wood products, and in formaldehyde-based resins.⁴ Other significant uses of formaldehyde include the manufacture of other chemicals, plastics and coatings, embalming and fertilizers.

Formaldehyde is generated in processes that use paraformaldehyde (CAS# 30525-89-4), formalin, or trioxane.

Formaldehyde may be coincidentally manufactured during the combustion of fuel.

7. Quantifying Formaldehyde Use in Combustion

Formaldehyde use occurs in combustion processes. In general, the quantities formaldehyde manufactured, processed, or otherwise used at a facility during combustion will be dependent on a number of factors, including the type of fuel combusted (coal, oil, gas), the type of combustor, and combustion conditions (e.g., temperature, air/fuel ratio).

Note that the information that follows is provided for general guidance – facilities are required to use the best readily available data applicable to their operations for threshold determinations.

MANUFACTURING:

Based on the EPA's AP-42 emission factors, 1000 or more pounds of formaldehyde is likely to coincidentally manufactured if annual fuel consumption is equal to or greater than the amounts listed below:

- Coal – 4.2 million tons
- No. 6 fuel oil – 30.3 million gallons
- No. 2 fuel oil – 16.4 million gallons
- Natural gas – 6,450 million ft³

Additional data sources on the coincidental manufacture of formaldehyde during combustion can be found in the references cited at the end of this document.

OTHERWISE USE

A substance is “otherwise used” in a production process if it is neither manufactured nor incorporated into the final product. Therefore any contaminants contained in fuel are considered “otherwise used” in the combustion process. The *de minimis* concentration applies to materials that are otherwise used. Materials below the *de minimis* concentrations (0.1 % for formaldehyde) do not need to be counted toward the 1000 pound “otherwise use” threshold. However the entire quantity of substances that are present in concentrations above the *de minimis* level must be counted toward the 1000 pound “otherwise use” threshold

- **Formaldehyde** is not likely to be present in fuels or ash above the *de minimis* level

REFERENCES FOR QUANTIFYING FORMALDEHYDE EMISSIONS FROM THE COMBUSTION OF FUEL

It is the responsibility of each facility to determine the best readily available data applicable to their operations. The methods and sources of data for quantifying formaldehyde use include, but are not limited to, the following:

1. Fuel-specific data for the fuels combusted (e.g., obtained from supplier).
2. Facility-specific monitoring data and/or emission factors.
3. For EPRI members – the PISCES database (provides emission factors and models to calculate air emissions), and Toxics Release Inventory for Power Plants (TRIPP) software.
4. EPA's *EPCRA Section 313 Industry Guidance – Electricity Generating Facilities*.
5. EPA emission factors from EPA's *Compilation of Air Pollutant Emission Factors (AP-42)*, 5th ed. - Chapter 1, *External Combustion Sources*. These factors are based on a limited number of samples and may not reflect more accurate information available to the facility for the particular type of fuel combusted and pollution control devices used.

Guidance on Quantifying Use and Reporting Cyanide Compounds under the Toxics Use Reduction Act

As of reporting year 2016, Cyanide Compounds (TURA chemical category # 1016) has been designated as a Higher Hazard Substance (HHS), lowering the reporting threshold to 1,000 pounds. The new threshold will apply to cyanide compounds use in calendar year 2016, which will be reported on Form S reports due July 1, 2017. This document provides guidance on determining if activities at your facility are likely to trip the reporting thresholds and how cyanide use is reported in compliance with the Toxics Use Reduction Act, including how cyanide use is reported on Form S.

Definition of the Category

Cyanide compounds include any chemical substance with the chemical formula: $X^+ CN^-$ where $X = H^+$ or any other group where a formal dissociation can be made. Examples include potassium cyanide (KCN) and calcium cyanide ($Ca(CN)_2$). Consistent with the TRI cyanide category (#N106) definition, hydrogen cyanide and ethyl cyanide are reported as individual chemicals, and are not included in the category. They are reported under their individual CAS numbers.

Reporting Thresholds

For use during calendar year 2015, continue to observe the reporting thresholds of 25,000 pounds for cyanide compounds manufactured or processed and 10,000 pounds for cyanide compounds otherwise used. For use during calendar year 2016, the thresholds will be 1,000 pounds for each of these, for reporting on Form S under TURA, but will remain unchanged for federal TRI reporting on Form R. Note that these three types of use are NOT additive for the purposes of determining whether the threshold has been exceeded. For example, a facility that manufactured 700 pounds and otherwise used 350 pounds of cyanide compounds would not be required to submit a Form S report on the substance, since neither type of use exceeded 1,000 pounds. However, if more than one cyanide compound was used for the same type of use then those quantities would be additive (e.g. processing 700 pounds of zinc cyanide and processing 400 pounds of copper cyanide trips the 1,000 pound threshold).

Because the federal and state thresholds for cyanide compounds are different, a “State-Only Form R” is submitted to the state along with the Form S when use exceeds the lower state TURA reporting threshold. The TURA eDEP system will automatically generate State Only Form Rs for these situations. Submit a separate Form R to the EPA TRI program when federal thresholds are exceeded.

Report What Enters, Leaves and is Manufactured During Processing

For reporting on Form S, report not only on what enters and leaves the process, but also on what is manufactured within the process. Compounds leaving the production process/unit must be counted as byproduct before entering a wastewater treatment process.

Common Uses of Cyanide Compounds

Cyanide compounds are primarily used in Massachusetts for electroplating and stripping of metallic surfaces. Other possible uses of cyanide compounds include the extraction and refining of precious metals and the synthesis of nitrogen-containing organic chemicals.

Common Forms of Cyanide Compounds

Common cyanide compounds include cyanide salts of: sodium, potassium, calcium, iron, zinc, copper, silver, cadmium, and gold. The anhydrous salts may be used directly with water to make plating baths which can be augmented with pure metal anodes. Sometimes a concentrated gold cyanide solution is used directly in plating baths rather than handling the more expensive pure metal form.

Often when plating a metal onto another metal product surface, an aqueous solution of the metal cyanide, sodium or potassium cyanide, and non-cyanide additives are used. Sometimes metal cyanide solution is added to the bath as the metal is plated out, especially with precious metals such as gold. More often the desired metal concentration of the solution is maintained by continuously dissolving the pure metal from the anode. Over time

contaminants accumulate in the solution and cause inferior plating results. In this case the plating bath may be dumped for disposal or reclamation.

[NOTE: Atomic Weight of Copper is 63.546 and Molecular Weight of Cuprous Cyanide is 89.563 Molecular weight of Sodium Cyanide is 49.007]

Cyanide Compound Example: Electroplating

A **300 gallon** copper plating tank operates with **1,000 Liters of solution**. A fresh solution is made up at the beginning of the calendar year with **60 kilograms of Copper Cyanide and 94 kilograms of Sodium Cyanide**.

Over the course of the year, **323 kilograms** of copper are consumed from the anode, creating **455 kg of copper cyanide** as **323 kilograms** of copper are plated from the solution onto steel parts. Also, **25 Kg of Cyanide salts** have been added to maintain tank concentrations due to drag out losses.

At the end of the year the plating bath has accumulated contaminants and needs replacement.

Data for Byproduct Cyanide Compounds = 179 kg x 2.20 = 394 lbs.

Data for Form S, Section 1: Facility-Wide Use of Listed Chemical (Cyanide Compounds

<i>c. Manufactured</i>	<i>1,001 pounds of Copper Cyanide (455 kg x (2.20 lb/kg))</i>
<i>d. Processed</i>	<i>132 pounds of Copper Cyanide (60 kg x (2.20 lb/kg)) When a given listed substance is introduced into production anywhere at the facility, it is counted only once at the facility level, regardless of how many times that listed substance is used, recycled or reused onsite. It is reported under the category that first trips the reporting threshold. Therefore, the 1,001 pounds of copper cyanide that was manufactured is reported as "manufactured". It is not included in the "processed" total because it was already reported as manufactured. (However, the total amount (1,133 pounds) manufactured and processed IS included in the production unit level reporting, and in the reported use range code.)</i>
<i>e. Otherwise used</i>	<i>262 pounds of Sodium Cyanide (94 kg + 25 kg) = 119 kg x (2.20 lb/kg)</i>
<i>f. Byproduct</i>	<i>394 pounds CuCN and NaCN (179 kg x (2.20 lb/kg))</i>
<i>g. Shipped as Product</i>	<i>0 pounds</i>

Form S, Section 2: Materials Balance

b. Chemical was Consumed or Transformed = 1,001 pounds of Copper Cyanide

Guidance on Reporting Hydrofluoric Acid as a Higher Hazard Substance under the Toxics Use Reduction Act

As of reporting Year 2016, hydrofluoric acid also known as hydrogen fluoride (HF) – CAS # 7664-39-3 will be designated as a higher hazard substance (HHS) under TURA, lowering the reporting threshold to 1,000 pounds. This is effective for reports covering use in Calendar Year 2016 and due July 1, 2017. This document explains the new reporting requirements and provides general reporting guidance for HF.

REPORTING THRESHOLD LOWERED TO 1,000 POUNDS

Designation as a higher hazard substance lowers the reporting threshold from the current thresholds of 25,000 pounds if the substance is manufactured or processed; and 10,000 pounds if the substance is otherwise used, to 1,000 pounds for each of the three uses. A Form S report is required for each higher hazard substance used at 1,000 or more pounds in a calendar year. Note that these three types of use are NOT additive for the purposes of determining whether the threshold has been exceeded. For example, a facility that manufactured 700 pounds and otherwise used 350 pounds of hydrogen fluoride would not be required to submit a Form S report on the substance, since neither type of use exceeded 1,000 pounds.

USE STATE-ONLY FORM R_s

The TURA e-DEP system will automatically generate State Only Form R_s for all substances for which the TURA reporting threshold is lower than the EPA Toxics Release Inventory threshold, and for all substances which have different “qualifiers” under the TURA and TRI systems. Of course, if federal thresholds are exceeded, submit a separate Form R to the EPA TRI program and generate a State Only Form R as well.

GENERAL REPORTING GUIDANCE

8. How Is Hydrofluoric Acid Commonly Used in Massachusetts?

Hydrofluoric acid is primarily used in Massachusetts for metal cleaning (pickling and desmutting) and etching applications, or is coincidentally manufactured by facilities.

9. Properties of Hydrofluoric Acid

Anhydrous hydrofluoric acid or hydrogen fluoride is a liquid that easily vaporizes at room temperature. Aqueous solutions of hydrofluoric acid are commonly sold in concentrations from 70% to 38% (by weight). Boiling temperatures range from 67 F for anhydrous to 235 F for 35% hydrofluoric acid.

10. How do I determine if I trip the reporting threshold?

Processing HF: Facilities producing specialty blends of fluoride chemicals will primarily report hydrogen fluoride as processed and occasionally as manufactured.

Example 1: The dilution of 1,430 pounds of 70% hydrofluoric acid to 49% hydrofluoric acid for resale would be considered *processing* 1,001 pounds of HF.

Example 2: If 1,430 pounds of 70% hydrofluoric acid is used to manufacture fluoroboric acid, report 1,001 pounds of HF as *processed*.

Example 3: If 2043 pounds of 49% hydrofluoric acid is used in solutions to remove oxides from stainless steel, report 1001 pounds HF as otherwise used.

Processing or Manufacturing HF from Ammonium Bifluoride or Other Fluoride Salts: When dry ammonium bifluoride (ABF) contacts water, it generates hydrofluoric acid. The hydrogen fluoride derived from fluoride salts (such as ABF) is considered *manufactured*. (EPA guidance 745-R-00-005)

Ammonium bifluoride used (*processed*) in dry blends for resale are not likely to have reportable quantities of HF. However, ammonium bifluoride added to water will *manufacture* HF. For example, if ABF is added to water with other proprietary constituents for resale, ABF could *manufacture* reportable quantities of HF depending upon the pH of the solution and other constituents that could affect the dissociation of ammonium bifluoride.

For example, HF for buffered etching solutions may be produced from ammonium bifluoride (CAS 1341-49-7) or ammonium fluoride (CAS 12125-01-8). In crystalline form these two chemicals may sublime to produce ammonia and HF gases. Some companies, however, prefer to handle and store this solid form rather than a concentrated solution of HF. In solution ammonium bifluoride can typically produce up to **35%** of its weight as hydrogen fluoride. That is, 2,857 pounds of NH_5F_2 can produce 1,000 pounds of HF (and 1,857 pounds of NH_4F). Ammonium fluoride (NH_4F) is considered a neutral salt, but in the presence of a stronger acid is capable of producing up to **54%** of its weight in HF. That is, 1,852 pounds of NH_4F could produce up to 1,000 pounds of HF if driven by the presence of another acid in the solution or an energy source. Thus, if ammonium bifluoride is put into solution with a stronger acid, up to 70% of its weight can be produced as hydrogen fluoride (e.g., 2,000 lbs. HF from 2,857 lbs. of NH_5F_2).

Example: In the calendar year 3,000 pounds of ammonium bifluoride is consumed in an etching bath. **35%** of 3,000 pounds *manufactures* 1,050 pounds of HF which exceeds the 1,000 pound threshold. This 1,050 pounds of HF is also *otherwise used*. However, under TURA, when a given listed substance is introduced into production anywhere at the facility, it is counted *only once at the facility level*, regardless of how many times that listed substance is used, recycled or reused onsite. Report the first use category that trips the threshold. For example, if 1,050 pounds of HF is manufactured at the facility, it is reported as “manufactured”. This amount is not also reported as “otherwise used” because it was already reported as manufactured. However, at *the production unit level*, the reportable substance *is* counted every time it is used (and if non integrally recycled, reused) in the process. In this case, the use range code reported for the production unit would reflect 2,100 pounds -- the sum of the amount manufactured and otherwise used.

Otherwise Use of HF: A substance is *otherwise used* in a production process if it is neither manufactured nor incorporated into the final product. The *de minimis* concentration applies to materials that are otherwise used. Materials below the *de minimis* concentrations (1.0 % for hydrofluoric acid) do not need to be counted toward the 1,000 pound *otherwise used* threshold. However the entire quantity of substances that are present in concentrations above the *de minimis* level must be counted toward the 1,000 pound *otherwise use* threshold.

11. Quantifying Hydrofluoric Acid Use in Combustion

Hydrofluoric acid is often *manufactured* in combustion processes, because. Fluoride compounds in fuels such as oil or municipal waste can be converted to hydrogen fluoride during combustion. The quantity of hydrogen fluoride manufactured at a facility during combustion will depend on a number of factors, including the type of fuel combusted (e.g., oil or municipal waste), the type of combustor, and combustion conditions (e.g., temperature and air/fuel ratio). Note that the information that follows is provided for general guidance – facilities are required to use the best readily available data applicable to their operations for threshold determinations.

Based on the EPA’s AP-42 emission factors, 1,000 or more pounds of hydrofluoric acid are likely to be coincidentally *manufactured* if annual fuel consumption is greater than 26,800,000 gallons (No. 6 oil).

Hydrofluoric acid is also coincidentally generated during municipal waste combustion. EPA has not published emission factors for HF from municipal waste combustion. AP-42 has a general statement about the variability of acid gas emissions including HF. Given the variability in HF amounts, it is incumbent on municipal waste combustors to make their own best engineering judgment on how much HF is coincidentally manufactured in the combustion process. According to one Emission Calculation, prepared by Malcolm Pirnie, for the Palm Beach Renewable Energy Facility permit application, that MWC facility will exceed the 1,000 lb HF threshold when it processes 36,630 ton/year (100 ton/day). [Ref.-13 Appendix B Emission Calculations for Palm Beach Renewable Energy Facility No. 2]

Additional data sources on the coincidental manufacture of Hydrofluoric Acid during combustion can be found in the references cited at the end of this document. De minimis exemptions do not apply to manufactured chemicals.

REFERENCES

It is the responsibility of each facility to determine the best readily available data applicable to their operations. The methods and sources of data for quantifying hydrochloric acid use include, but are not limited to, the following –

Guidance for Reporting Toluene Diisocyanate (TDI) as a Higher Hazard Substance under TURA

The following three individually listed diisocyanates have been designated as higher hazard substances (effective reporting year 2017) with a reporting threshold of 1,000 pounds.

- 2,4-Toluene Diisocyanate (2,4-TDI) – CAS 584-84-9
- 2,6- Toluene Diisocyanate (2,6-TDI) – CAS 91-08-7
- Toluene Diisocyanate (TDI-mixed isomers) – CAS 26471-62-5
For purposes of reporting under EPCRA Section 313 and TURA, “toluene diisocyanate (mixed isomers)” includes any possible mixture of any toluene diisocyanates in which the isocyanate groups are separated by one carbon in the ring (i.e., are one/three to each other). This listing includes the 2,4-, 2,6-, and 3,5- isomers of toluene diisocyanate (TDI).

1. A separate report and fee is required for each TDI isomer for which the 1,000 pound threshold is exceeded.
2. Calculate the threshold for each CAS number separately.
 - a. The total quantity of TDI mixed isomers is calculated as the sum of ALL TDI isomers (not just 2,4 TDI and 2,6 TDI) present in the mixture at concentrations above the de minimus level.
 - b. If using both TDI mixed isomers and one or both of the pure forms, do NOT add the amount of the pure form present in the mixed isomers to the total amount of the pure form used. Include only the amount of the pure form that was introduced into production.
 - c. If using both TDI mixed isomers and one or both of the pure forms, do NOT add the amount of the pure form used to the total amount of the mixed isomers used. Include only the amount of the mixed isomers introduced into production.
3. State only Form Rs are required for these substances. Submit a separate federal Form R to EPA if the federal threshold for any of these substances is also exceeded.

Rules for Reporting the Use of Ammonia and Ammonium Hydroxide under TURA

To further clarify the reporting of ammonia and ammonium hydroxide under TURA, MassDEP recommends that reporting be consistent with EPCRA. Thus, there will not be a State-only Form R/A required for ammonium hydroxide, and TURA filers should not file a Form S for ammonium hydroxide (CAS# 1336-21-6). Only one fee will be required to the state for the reporting of ammonia as ammonium hydroxide. MassDEP interprets ammonium hydroxide to be equivalent to aqueous ammonia (as does EPCRA), and 10% of aqueous ammonia (CAS# 7664-41-7) is reportable under TURA, effective reporting year 2000. Please refer to the EPCRA Section 313 Guidance for Reporting Aqueous Ammonia, Revised April 2018, EPA 745-R-00-005, at: https://ofmpub.epa.gov/apex/guideme_ext/f?p=guideme:gd-title:::::title:ammonia.

The following is quoted from #451, EPCRA Section 313 Questions and Answers, December 1998, EPA 745-B-98-004:

“ . . . The chemical ammonium hydroxide (NH₄OH) is a misnomer. It is a common name used to describe a solution of ammonia in water (i.e., aqueous ammonia), typically a concentrated solution of 28 to 30 percent ammonia. EPA has consistently responded to questions regarding the reportability of these purported ammonium hydroxide solutions under the EPCRA Section 313 ammonia listing by stating that these are 28 to 30 percent solutions of ammonia in water and that the solutions are reportable under EPCRA Section 313 ammonia listing. For a more detailed discussion, see page 34175 of the Federal Register final rule of June 30, 1995 (60 FR 34172).

Facilities should use the percent total ammonia specified on the label of ammonium hydroxide solutions they purchase to determine the total ammonia content in these solutions. Ammonium hydroxide has the chemical formula NH₄OH; however, as mentioned above, strong evidence indicates that the species NH₄OH does not exist. Bottles of concentrated aqueous ammonia purchased from chemical supply companies are almost always labeled ammonium hydroxide. These solutions primarily consist of molecules of NH₃ dissolved in water (along with small amounts of ionized ammonia) . . . ”

Please note that different chemical suppliers will reference the % of ammonia in different ways. Therefore, it is recommended that facilities contact their chemical suppliers to specify the amount of ammonia per gallon. This question could be specified in “percent by weight per gallon” or in “number of pounds per gallon” of solution, for example.

✓ Example 1	
Facility otherwise uses 1,000,000 pounds of 30% solution by weight of ammonium hydroxide (30% ammonia by weight).	
1,000,000 pounds x 0.30 = 300,000 pounds of ammonia	
Only 10% of ammonia is reportable on Form R per EPA <u>Guidance for Reporting Aqueous Ammonia</u>	
300,000 x 0.10 = 30,000 pounds of ammonia	
This facility would complete one Form S and one Form R for 30,000 pounds of reportable ammonia (see EPCRA Guidance for Reporting Aqueous Ammonia).	
✓ Example 2	
54,231 gallons of aqueous ammonia (19.0%)	
54,231 gallons x 8.34 pounds/gallon x 0.935 specific gravity	
= 422,888 pounds aqueous ammonia x 19.0%	
80,349 pounds ammonia x 10% reportable ammonia = 8,035 pounds ammonia	
This facility does not meet TURA or TRI reporting thresholds.	

Guidance for TURA Reporting and Planning for Certain Metals and Metal Alloys

An alloy is a mixture of two or more metals or one or more metals and a nonmetal, as in carbon steel.

Effective reporting year 1995, the TURA Administrative Council delisted certain metals when present in a solid or molten alloy, but not including aerosols. The metals are:

Copper
Nickel
Chromium
Cobalt
Manganese

Effective reporting year 1998, the TURA Administrative Council delisted silver-copper mixture when present in an alloy form, but not including aerosols.

The established definition of an “alloy” requires that metals mixed with the primary metal must be intentionally added to improve its properties. A metallic substance that is pure or contains other metals as impurities is not considered an alloy. Consequently, copper and silver that is pure or that contains small amounts of impurities were not covered by the two Administrative Council delistings described above.

Effective reporting year 1999, however, the Administrative Council delisted pure (i.e., zero valance) copper and pure silver (including forms containing impurities), but not including aerosols.

The delistings for all the metals described above **DO NOT** extend to aerosols, dissolved metals, metal compounds, or metals that are not zero valance throughout the entire production process. Note that aerosols are metal particles that are less than 50 microns in diameter.

These metals have not been delisted from the EPCRA Toxics Release Inventory (TRI) List. Although delisting by the TURA Administrative Council means that no Toxics Use Report need be submitted, the federal Form R is still required by EPA. The federal Form R submitted to MassDEP should be identified as “federal only.”

Guidance

Questions have been raised regarding implementation of these delistings. This guidance has been produced to assist the regulated community in complying with TURA. If you have any remaining questions after reading this document, please contact MassDEP for compliance assistance or the Office of Technical Assistance for further information.

The delisted metals are copper, nickel, chromium, cobalt, manganese and silver. Some of the processes in which those metals might be used are described below with specific guidance.

- Etching processes – When a metal is removed from metal stock through chemical processing, the resultant metal salt is reportable if it is produced in threshold quantities. (In this case, the metal salt is “coincidentally manufactured.”) The 25,000-pound threshold would apply if the metal salt were the only reportable chemical. It should be noted that the entire weight of the metal salt is

considered when determining whether a threshold has been met, and not just the amount of the metal in the salt. As for the stock itself, any delisted metals contained in it are not reportable.

- Electropolishing operations - The metal salts in solution are reportable as “coincidentally manufactured” if they are produced in threshold quantities. Any delisted metals contained in the stock are not reportable.
- Grinding Operations - The delisted metals are not exempt from reporting when contained in aerosols, i.e., particles less than 50 microns in diameter (in this case, the metal is reported as “processed”). These metals are reportable if they are present in threshold quantities. When determining whether the reporting threshold has been exceeded, only the weight of the listed metal in the aerosol is considered, and not the total weight of the aerosol. Any delisted metals contained in the stock are not reportable.
- Multiple processes - In production units with multiple processes, certain individual processes may produce metal aerosols or metal salts in solution. Those aerosols and metal salts in solution would be reportable if produced in threshold quantities, as described above.
- Alloys in powdered form - If a metal is used in the powdered form, the facility will need to perform a particle size analysis to determine the amount of material less than 50 microns in size. If threshold quantities are produced, the metals are reportable if they are present in particles less than 50 microns in size. When determining whether the reporting threshold has been exceeded, only the weight of the listed metal is considered, and not the total weight of particles.

Note: MassDEP’s “Expanded Article” exemption is no longer applicable, since it applied to metals that have been delisted under TURA.

Difference in TRI and TURA Reporting of Hydrochloric Acid and Sulfuric Acid

- A qualifier was added to **hydrochloric acid (CAS No. 7647-01-0)** on the EPCRA list that relieves TRI reporting for non-aerosol forms, effective reporting year 1996. A similar qualifier was added for **sulfuric acid (CAS No. 7664-93-9)** effective reporting year 1995. TRI reporting only is required for acid aerosols including mists, gas, vapors, fog, and other airborne forms of any particle size. **This qualifier is only applicable to EPCRA Form R submissions.**

- Since this chemical also is on the CERCLA list, **all forms (both aerosol and non-aerosol) are reportable under TURA.** A “State-Only” Form R must be submitted with the Form S for these acids, in addition to the Form R submitted to EPA for only acid aerosols.

- For additional assistance on calculating and reporting sulfuric acid, please refer to the following EPA document: Sulfuric Acid: EPA-745-R-97-007 (11/97) Guidance for Reporting Sulfuric Acid (acid aerosols including mists, vapors, gas, fog and other forms of any particle size). This document is available from the EPA EPCRA Hotline 1-800-535-0202 and can be downloaded off the EPA TRI home page at <http://www.epa.gov/tri/>.

Rules for Reporting Glycol Ethers

There are separate categories for glycol ethers defined under EPCRA and CERCLA. (Please refer to the TRI guidance document, "List of Toxic Chemicals within the Glycol Ethers Category and Guidance for Reporting," EPA 745-R-00-004.)

Reporting Guidance

EPCRA: Glycol Ethers are reportable as the glycol ethers category, (1022). The glycol ethers category is defined by the following formula:

where:

n = 1, 2, or 3;

R = Alkyl C7 or less, or phenyl or alkyl substituted phenyl;

R' = H or alkyl C7 or less, or

OR' consisting of a carboxylic acid ester, sulfate, phosphate, nitrate, or sulfonate.

Chemicals that meet this category definition are reportable.

Individually Listed Glycol Ethers

There are two chemicals, 2-methoxyethanol (CAS number 109-86-4) and 2-ethoxyethanol (CAS number 110-80-5) that are on the individual chemical list and CAS number list (40 CFR 372.65(a) and (b)). Threshold determinations should be made for each of these chemicals individually and separately from the glycol ethers category.

(continued on next page)

Reporting Guidance

CERCLA: Glycol Ethers are reportable under CERCLA as defined by the following chemical formula:

Includes mono and di-ethers of ethylene glycol, diethylene glycol, and triethylene glycol R-(OCH₂CH₂)_n-OR' where:

-n= 1, 2, or 3.

-R= alkyl or aryl groups.

-R' = R, H, or groups which, when removed, yield glycol ethers with the structure: R-(OCH₂CH₂)_n-OH. Polymers are excluded from the glycol category.

Any glycol ether that meets the CERCLA definition only is reportable if it is specifically named on the TURA list. If a glycol ether meets both the EPCRA and the CERCLA definitions, it is reportable under the EPCRA category (N230).

Rules for Reporting Specifically Listed Chemicals vs. Chemical Categories

The table below summarizes how to report chemicals that are specifically listed and/or listed as chemical categories. Descriptions of specific reporting requirements for each row follow the table.

Row No.	EPCRA Specific Chemical	EPCRA Category	CERCLA Specific Chemical	CERCLA Category	Report as:
1	Yes	Yes			EPCRA Specific Chemical
2	Yes			Yes	EPCRA Specific Chemical
3			Yes	Yes	CERCLA Specific Chemical
4		Yes			EPCRA Category
5		Yes		Yes	EPCRA Category
6				Yes	Do Not Report *
7		Yes	Yes		EPCRA Category

Rows 1 & 2:

If a specific chemical is named on EPCRA and it also is reportable under either an EPCRA or CERCLA listed category, it should be reported **only as a specific EPCRA chemical, not under the category.**

✓ Example

: EPCRA category (Compounds), EPCRA specifically listed
Report as: EPCRA specific chemical (Hydrogen Cyanide)

1,2,4 Trichlorobenzene: EPCRA specifically listed, CERCLA category (Chlorinated Benzenes)

Report as: EPCRA specific chemical (1,2,4 Trichlorobenzene)

Row 3:

When a specifically listed CERCLA chemical falls within a CERCLA listed category, it should be reported **only as the specific CERCLA chemical.**

✓ Example

- Benzenesulfonyl Chloride: CERCLA specifically listed, CERCLA category (Chlorinated Benzenes)

Report as: CERCLA specific chemical (Benzenesulfonyl Chloride)

Row 4:

Chemicals falling under an EPCRA chemical category or categories which are not specifically listed under EPCRA or CERCLA should be reported under the EPCRA chemical category or categories.

✓ **Example: Silver Nitrate, Reporting Two Competing Compound Classes**

If you are reporting Silver Nitrate, you need to report under both the Silver Compounds and Nitrate Compounds categories.

* **Report the SAME weight for Silver Compounds and Nitrate Compounds use (total weight of the compound) on EACH Form S.**

* For Byproduct tracking, report ONLY the weight of the reportable constituent for each category.

* In Section 2 of each Form S, enter the weight of the chemical in d.

* Even though you will file 2 separate Form S's for Silver Compounds and Nitrate Compounds, you will **pay only ONE TURA fee for both chemicals.** (Example Form S's are shown on the next page.)

Row 5:

Chemicals falling under an EPCRA chemical category and a CERCLA chemical category which are not specifically listed under EPCRA or CERCLA should be reported under the EPCRA chemical category.

Row 6:

Chemicals that only are listed as a CERCLA category are not reportable.

CERCLA Category only: phthalate esters, polynuclear aromatic hydrocarbons, polycyclic organic matter, glycol ethers, chlorinated phenols, etc. should NOT be reported unless they are specifically named.

Row 7:

Chemicals falling under an EPCRA chemical category and are specifically listed under CERCLA should be reported under the EPCRA chemical category.

✓ **Form S Example:**

Section 1: Facility-Wide Use of Listed Chemical

1037

a. CAS #

Silver Compounds

b. Chemical Name (Dioxin should be in grams, decimal points may be used)

Facility-wide use of chemical identified in a. Enter the total amount (in POUNDS, except for dioxin) for each applicable category. NOTE: "Generated as byproduct" (item f.) means all waste containing the listed chemical before the waste is handled, transferred, treated, recycled or released. Please refer to the reporting instructions before completing this section.

_____	26,000
c. Manufactured	d. Processed
_____	635
e. Otherwise used	f. Generated as Byproduct
25,000	h. <input type="checkbox"/> Check here to input Form R or A information to MassDEP
g. Shipped in or as product	

Section 2: Materials Balance

When the amounts reported in c, d and e in Section 1 are added together, the sum will in many cases equal the sum of f and g. In other words, lines c, d and e will often form a "materials balance." If lines c, d and e are not in approximate balance, you must use this section to explain why. Indicate all the reasons that apply by entering the number of pounds on the appropriate line below (e.g., 4,000 Chemical was held in inventory).

_____	_____
a. Chemical was recycled on site	b. Chemical was consumed or transformed
_____	365
c. Chemical was held in inventory	d. Chemical is a compound

e. Other (explain below)	

f. Did anything non-routine occur at your facility during the reporting year which affected the data reported?
 Yes* No *If your answer is Yes, you may explain in Section 4.I. on Page 3.

Section 1: Facility-Wide Use of Listed Chemical

1090

a. CAS #

Nitrate Compounds

b. Chemical Name (Dioxin should be in grams, decimal points may be used)

Facility-wide use of chemical identified in a. Enter the total amount (in POUNDS, except for dioxin) for each applicable category. NOTE: 'Generated as byproduct' (item f.) generally means all waste containing the listed chemical before the waste is handled, transferred, treated, recycled or released. Please refer to the reporting instructions before completing this section.

_____	26,000
c. Manufactured	d. Processed
_____	365
e. Otherwise used	f. Generated as Byproduct
_____	h. <input type="checkbox"/> Check here to input Form R or A information i.
25,000	_____
g. Shipped in or as product	to MassDEP
	Ratio
	Production

Section 2: Materials Balance

When the amounts reported in c, d and e in Section 1 are added together, the sum will in many cases equal the sum of f and g. In other words, lines c, d and e will often form a "materials balance." If lines c, d and e are not in approximate balance, you must use this section to explain why. Indicate all the reasons that apply by entering the number of pounds on the appropriate line below (e.g., 4,000 Chemical was held in inventory).

_____ a. Chemical was recycled on site

_____ b. Chemical was consumed or transformed

_____ c. Chemical was held in inventory

635

_____ d. Chemical is a compound

_____ e. Other (explain below)

f. Did anything non-routine occur at your facility during the reporting year which affected the data reported?
 Yes* No *If your answer is Yes, you may explain in

Guidance on Certain TURA Reportable Chemical Categories

TURA requires reporting on many chemical categories. The individual chemicals included in each chemical category should always be reported in their parent chemical category (e.g., antimony compounds), and not as individual chemicals. Below is guidance on which individual chemicals are included in some of the reportable chemical categories. Please note that this is not an exhaustive list of reportable chemical categories or of individual chemicals within the chemical categories listed below.

Chemical Category	CAS No.	Chemical Name
1000 Antimony Compounds Includes any unique chemical substance that contains antimony as part of the chemical's infrastructure. Includes, but is not limited to:	1309-64-4	Antimony Trioxide
	7647-18-9	Antimony Pentachloride
	7783-56-4	Antimony Trifluoride
	7789-61-9	Antimony Tribromide
	10025-91-9	Antimony Trichloride
	28300-74-5	Antimony Potassium Tartrate
1001 Arsenic Compounds Includes any unique chemical substance that contains arsenic as part of the chemical's infrastructure. Includes, but is not limited to:	692-42-2	Diethylarsine
	696-28-6	Dichlorophenylarsine
	1303-28-2	Arsenic Pentoxide
	1303-32-8	Arsenic Disulfide
	1303-33-9	Arsenic Trisulfide
	1327-52-2	Arsenic Acid
	1327-53-3	Arsenic Trioxide
	7631-89-2	Sodium Arsenate
	7645-25-2	Lead Arsenate
	7778-39-4	Arsenic Acid
	7778-44-1	Calcium Arsenate
	7784-34-1	Arsenous Trichloride
	7784-40-9	Lead Arsenate
	7784-41-0	Potassium Arsenate
	7784-46-5	Sodium Arsenite
	10102-48-4	Lead Arsenate
10124-50-2	Potassium Arsenate	
52740-16-6	Calcium Arsenate	
1002 Barium Compounds Includes any unique chemical substance that contains barium as part of the chemical's infrastructure. Does not include barium sulfate, CAS # 7727-43-7. Includes, but is not limited to:	542-62-1	Barium Cyanide

Chemical Category	CAS No.	Chemical Name	
1003 Beryllium Compounds Includes any unique chemical substance that contains beryllium as part of the chemical's infrastructure. Includes, but is not limited to:	7787-47-5	Beryllium Chloride	
	7787-49-7	Beryllium Fluoride	
	7787-55-5	Beryllium Nitrate	
	13597-99-4	Beryllium Nitrate	
1004 Cadmium Compounds Includes any unique chemical substance that contains cadmium as part of the chemical's infrastructure. Includes, but is not limited to:	543-90-8	Cadmium Acetate	
	7789-42-6	Cadmium Bromide	
	10108-64-2	Cadmium Chloride	
1009 Chlorophenols Please see EPA TRI reporting instructions. Includes, but is not limited to:	58-90-2	2,3,4,6-Tetrachlorophenol	
	87-65-0	2,6 Dichlorophenol	
	95-57-8	2-Chlorophenol	
	609-19-8	3,4,5 Trichlorophenol	
	933-75-5	2,3,6 Trichlorophenol	
	933-78-8	2,3,5 Trichlorophenol	
	5344-82-1	2-Chlorophenolthiourea	
	7005-72-3	Chlorophenyl Phenyl Ether	
	15950-66-0	2,3,4 trichlorophenol	
	25167-82-2	Trichlorophenol	
1216 Cr(VI) Chromium Compounds Hexavalent Chromium Compounds. Please refer to guidance on reporting Hexavalent Chromium Compounds in Appendix B. This list includes, but is not limited to the following compounds:	CAS No.(s)	Chemical Formula	Compound
	7788-98-9	(NH ₄) ₂ CrO ₄	Ammonium Chromate
	7789-09-5	(NH ₄) ₂ Cr ₂ O ₇	Ammonium Dichromate

Chemical Category	CAS No.	Chemical Name
1217 Non Cr(VI) Chromium Compounds Non-Hexavalent Chromium Compounds. Includes, but is not limited to*:	1066-30-4	Chromic Acetate
	10101-53-8	Chromic Sulfate
	1308-31-2	Chromite
	10049-05-5	Chromous Chloride
	7788-97-8	Chromous Fluoride
1013 Cobalt Compounds Includes any unique chemical substance that contains cobalt as part of the chemical's infrastructure. Includes, but is not limited to:	544-18-3	Cobaltous Formate
	7789-43-7	Cobaltous Bromide
	14017-41-5	Cobaltous Sulfamate
1015 Copper Compounds Includes any unique chemical substance that contains copper as part of the chemical's infrastructure. Does not include copper phthalocyanine compounds that are substituted with only hydrogen, and/or chlorine, and/or bromine. Includes, but is not limited to:	137-29-1	Copper, bis(dimethylcarbomodithioato-s-s)-
	544-92-3	Copper Cyanide
	815-82-7	Cupric Tartrate
	3251-23-8	Cupric Nitrate
	5893-66-3	Cupric Oxalate
	7447-39-4	Cupric Chloride
	7758-98-7	Cupric Sulfate
	10380-29-7	Cupric Sulfate, Ammoniated
1016 Cyanide Compounds X^+CN^- where $X = H^+$ or any other group where a formal	57-12-5	Cyanides
	143-33-9	Sodium Cyanide
	151-50-8	Potassium Cyanide

dissociation may occur. For example KCN or CA(Cn) ₂ . Includes, but is not limited to:	460-19-5	Cyanogen
	506-61-6	Potassium Silver Cyanide
	506-64-9	Silver Cyanide
	506-68-3	Cynogen Bromide
	506-77-4	Cyanogen Chloride
	542-62-1	Barium Cyanide
	544-92-3	Copper Cyanide
	557-19-7	Nickel Cyanide
	557-21-1	Zinc Cyanide
	592-01-8	Calcium Cyanide
	592-04-1	Mercuric Cyanide
	592-85-8	Mercuric Thiocyanate

	218-01-9	Benzo(a)phenanthrene
	224-42-0	Dibenz(a,j)acridine
	226-36-8	Dibenz(a,h)acridine
	3697-24-3	5-Methylchrysene
	5385-75-1	Dibenzo(a,e)Fluoranthene
5522-43-0	1-Nitropyrene	
1036 Selenium Compounds Includes any unique chemical substance that contains selenium as part of the chemical's infrastructure. Includes, but is not limited to:	144-34-3	Carbamodithioic Acid, dimethyl-, Tetraanhydrosulfid with Orthothioselenious Acid
	630-10-4	Selenourea
	7446-08-4	Selenium Dioxide
	7488-56-4	Selenium sulfide
	7782-82-3	Sodium Selenite
	7783-00-8	Selenious Acid
	10102-18-8	Sodium Selenite
	12039-52-0	Selenious Acid, Dithallium (1+) Salt
1037 Silver Compounds Includes any unique chemical substance that contains silver as part of the chemical's infrastructure. Includes, but is not limited to:	506-61-6	Potassium Silver Cyanide
	506-64-9	Silver Cyanide
	7761-88-8	Silver Nitrate
1070 Strychnine and Salts Includes any unique chemical substance that contains strychnine or a strychnine salt as part of the chemical's infrastructure. Includes, but is	57-24-9	Strychnine and Salts

not limited to:		
Chemical Category	CAS No.	Chemical Name
1038 Thallium compounds Includes any unique chemical substance that contains thallium as part of the chemical's infrastructure. Includes, but is not limited to:	563-68-8	Thallium Acetate
	1314-32-5	Thallic Oxide
	6533-73-9	Thallos Carbonate
	7446-18-6	Thallium sulfate
	7791-12-0	Thallium Chloride
	10031-59-1	Thallium sulfate
	10102-45-1	Thallium Nitrate
	12039-52-0	Selenious Acid, dithallium (1+0 Salt)
1065 Vanadium Compounds Includes any unique chemical substance that contains vanadium as part of the chemical's infrastructure. Includes, but is not limited to:	1314-62-1	Vanadium Pentoxide
1039 Zinc Compounds Includes any unique chemical substance that contains zinc as part of the chemical's infrastructure. Includes, but is not limited to:	127-82-2	Zinc Phenolsulfonate
	137-30-4	Zinc, Bis(dimethylcarbomodithiato-S,S)-
	557-21-1	Zinc Cyanide
	557-34-6	Zinc Acetate
	557-41-5	Zinc Formate
	1314-84-7	Zinc Phosphide
	1332-07-6	Zinc Borate
	3486-35-9	Zinc Carbonate
	7646-85-7	Zinc Chloride
	7699-45-8	Zinc Bromide
	7720-78-7	Zinc Sulfate
	7779-86-4	Zinc Hydrosulfite
	7779-88-6	Zinc Nitrate
	7783-49-5	Zinc Fluoride
	14324-55-1	Zinc,Bis(diethylcarbomodithioato-S,S)-
	14639-97-5	Zinc Ammonium Chloride
	14639-98-6	Zinc Ammonium Chloride
	16871-71-9	Zinc Silicofluoride
	52628-25-8	Zinc Ammonium Chloride

Appendix C: Form S, Section 4: Toxics Use by Production Unit

This section provides guidance in completing Section 4 of the Form S. The purpose of Section 4 of the Form S, is to indicate if use and/or byproduct increased or decreased by more than 10% compared to the previous reporting year, and if so, what lead to the change as indicated by TUR technique codes).

Four example situations are presented. Each example is followed by a properly completed Form S for the situation, and then a solution. The four examples are:

- Example 1: Production increase and chemical use in production unit and waste treatment operations
- Example 2: Increase in production and TUR implementation
- Example 3: Product reformulation and on-site recycling
- Example 4: Web coating improved cleaning operation with chemical substitution
-

Example #1 – Production increase and chemical use in production unit and waste treatment operations

Company ABC (Facility ID 70709) etches aluminum with sodium hydroxide and then anodizes the aluminum part using sulfuric acid (CAS 8014-95-7). For reporting year 2009 the company reported 120,000 pounds of sulfuric acid otherwise used, 50,000 pounds of that use was waste treatment pH neutralization and 70,000 pounds was used in anodizing (process code AA-18) in production unit #1. The company reported 50,000 pounds of byproduct for reporting year 2009 and 20,000 pounds of sulfuric acid consumed or transformed on line 2b of the Form S.

The company's Form S for sulfuric acid in reporting year 2009 is:

1e.	120,000 lbs	Otherwise used
1f.	50,000 lbs	Generated as Byproduct
2b.	20,000 lbs	Chemical was consumed or transformed
3b.	50,000 lbs	Amount of chemical used in waste treatment

Assuming all process efficiencies stayed the same in reporting years 2009 and 2010, and the company did not implement TUR projects in reporting year 2010, how would the facility complete the reporting year 2010 Form S if they had a 14% increase in business production and used 80,000 pounds of sulfuric acid in production unit #1? Assume the company used 50,000 pounds of sulfuric acid in waste treatment in reporting year 2010 and it reported a facility-wide use of sulfuric acid of 130,000 pounds in reporting year 2010.

The company's Form S for sulfuric acid in reporting year 2010 is on the following page:

Massachusetts Department of Environmental Protection
Bureau of Waste Prevention

Toxics Use Report - Form S

Chemical Use Facility-Wide and by Production Units

Reporting Year
ABC
Facility Name
70709
DEP Facility ID Number
Sulfuric Acid
Chemical Name

Section 1: Facility-Wide Use of Listed Chemical

Important:
When filling out forms on the computer, use only the tab key to move your cursor - do not use the return key.

9014-95-7 Sulfuric Acid
a. MA DEP CAS # b. Chemical Name (Dioxin should be in grams, decimal points may be used)

Facility-wide use of chemical identified in a. Enter the total amount (in POUNDS, except for dioxin) for each applicable category. **NOTE:** 'Generated as byproduct' (item f.) means all waste containing the listed chemical before the waste is handled, transferred, treated, recycled or released. Please refer to the reporting instructions before completing this section.

c. Manufactured	d. Processed
130,000	57,143
e. Otherwise Used	f. Generated As Byproduct
g. Shipped In Or As Product	h. <input type="checkbox"/> Check here to input Form R or A information to MassDEP i. _____ Production Ratio

Section 2: Materials Balance

When the amounts reported in c, d and e in Section 1 are added together, the sum will in many cases equal the sum of f and g. In other words, lines c, d and e will often form a "materials balance." If lines c, d and e are not in approximate balance, you must use this section to explain why. Indicate all the reasons that apply by entering the number of pounds on the appropriate line below (e.g., 4,000 Chemical was held in inventory).

_____	22,857
a. Chemical Was Recycled On Site	b. Chemical Was Consumed Or Transformed
_____	_____
c. Chemical Was Held In Inventory	d. Chemical Is A Compound

e. Other	

f. Did anything non-routine occur at your facility during the reporting year that affected the data reported?

Yes* No *If your answer is Yes, you may explain in Section 4.m. on Page 3.

Section 3: Chemicals Used in Waste Treatment Units

Massachusetts Department of Environmental Protection
Bureau of Waste Prevention

Chemical Name

- a. Is this chemical used to treat waste or control pollution?
 Yes No* *If your answer is No, please skip ahead to Section 4.
- b. Please enter the amount of the chemical (in pounds) used to treat waste or control pollution.
50,000
Pounds

Section 3: Chemicals Used in Waste Treatment Units (continued)

- c. Did the use of this chemical for waste treatment or pollution control increase or decrease by 10 percent or more compared with the previous reporting year?
c.1 Yes* No *If your answer is Yes, you may explain in Section 4.m. on Page 3.
c.2 Yes No Are there more chemicals to report? (Use ONLY if ALL chemicals are used to treat waste or control pollution.)

Section 4: Toxics Use by Production Unit

1
a. Production Unit #

Use

- b. Quantity of Chemical Code:
 1. ≤5,000 lbs. 2. > 5,000 ≤10,000 lbs. 3. > 10,000 lbs. ≤100,000 lbs.
 4. > 100,000 lbs. ≤500,000 lbs. 5. > 500,000 lbs.
- c. Did the use of this chemical in this production unit increase or decrease by 10 percent or more compared with the previous reporting year and/or did you implement toxics use reduction?
 Yes No* *If your answer is No, skip ahead to g. below.

Process code(s) where most significant changes occurred (up to three in descending order)	Type of Change (Enter "I" for Increase, "D" for Decrease)	Technique Code(s) (up to three per process code)		
AA-18	I	68		
d.1.	2.	3a.	3b.	3c.
e.1.	2.	3a.	3b.	3c.
f.1.	2.	3a.	3b.	3c.

Byproduct

- g. Was byproduct generated for this chemical less than 1 percent of use in this production unit?
 Yes* No *If your answer is Yes, skip ahead to m. on Page 3.

- h. Did the byproduct generated for this chemical in this production unit increase or decrease by 10 percent or more compared with the previous reporting year and/or did you implement toxics use reduction?

Yes No*

*If your answer is No, skip ahead to m. on Page 3.

Process code(s) where most significant changes occurred (up to three in descending order)	Type of Change (Enter "I" for Increase, "D" for Decrease)	Technique Code(s) (up to three per process code)		
AA-18 i.1.	I 2.	68 3a.	 3b.	 3c.
 j.1.	 2.	 3a.	 3b.	 3c.
 k.1.	 2.	 3a.	 3b.	 3c.

- i. Are there more production units that use this chemical? Yes No

- m. You may add any comments or explanations regarding chemical use and/or byproduct generated in this production unit, chemical use in waste treatment (from Section 3), and non-routine occurrences at your facility (from Section 2).

Solution for Problem #1:

Reporting Year: **2010**

Facility Name: **Company ABC**

DEP Facility ID Number: **70709**

Chemical Name: **Sulfuric Acid**

Section 1: Facility wide use of Listed Chemical

1a. **9014-95-7**

1b. **Sulfuric Acid**

1e. **130,000 lbs** **Otherwise Used** **(given)**

1f. **57,143 lbs** **Generated as Byproduct**

(50,000 lbs byproduct 2009/70,000 lbs used in anodizing 2009)*(80,000 lbs used in anodizing 2009) = 57,143 lbs of byproduct 2010

This calculation is based on the statement in the problem that "...all process efficiencies stayed the same in 2009 and 2010..."

Section 2: Materials Balance

2b. **22,860 lbs** **Chemical Was Consumed or Transformed**

80,000 lbs used in anodizing – 57,143 lbs byproduct = 22,857 lbs consumed or transformed

2f. **No**

Section 3: Chemicals Used in Waste Treatment Units

3a. **Yes**

3b. **50,000 lbs (given)**

3c. **No.**

Section 4: Toxics Use by Production Unit

4a. Production Unit #1

4b. 3. >10,000 lbs. ≤100,000 lbs.

4c. Yes.

Formula: If:

$$(\text{previous year's use}) * 0.9 < (\text{reporting year's use}) < (\text{previous year's use}) * 1.1$$

Then: the use of the chemical did not change by 10%.

$$2009 \text{ use (70,000 lbs)} * 1.1 = 77,000 \text{ lbs}$$

$$2009 \text{ use (70,000 lbs)} * 0.9 = 63,000 \text{ lbs}$$

2010 Use = 80,000 lbs which is a greater than 10% increase.

4d1. AA-18

4d2. I

4d3a. 68 (Production increased)

4g. No.

4h. Yes.

Formula: If:

$$(\text{previous year's byproduct generation}) * 0.9 < (\text{reporting year's byproduct generation}) < (\text{previous year's byproduct generation}) * 1.1$$

Then: byproduct generation of the chemical did not change by 10%.

$$2009 \text{ byproduct generation (50,000 lbs)} * 1.1 = 55,000 \text{ lbs}$$

$$2009 \text{ byproduct generation (50,000 lbs)} * 0.9 = 45,000 \text{ lbs}$$

2010 byproduct generation = 57,143 lbs which is a greater than 10% increase.

4i1. AA-18.

4i2. I

4i3. 68 (Production increased)

4l. No

Example #2: Increase in production and TUR implementation

Boards Etc. (Facility ID 9763459) is a contract circuit board assembler. It attaches customer specified components on customer supplied circuit board via wave soldering (process code CC-08) in production unit #1. In reporting year 2009, it used tin-lead solder that contained 3,436 pounds of lead (CAS 7439-92-1), a TURA reportable substance. That same year the company sent solder dross off-site for recycling and received a statement back from its recycler that 1,827 pounds of lead were recovered from the dross. Results of engineering estimates show that 2.5 pounds of lead were released as an air point source and 1,606 pounds of lead were applied to customer circuit boards and shipped with products.

The company's Form S for lead in reporting year 2009 is:

- | | | |
|-----|-------------|--------------------------|
| 1d. | 3,436 lbs | Processed |
| 1f. | 1,829.5 lbs | Generated as Byproduct |
| 1g. | 1,606 lbs | Shipped in or as product |

In reporting year 2010 the company purchased and processed 3,354 pounds of lead in their solder. During that same reporting year it processed 10% more circuit boards than in reporting year 2009 and implemented a dross control program that reduced dross generation and recoverable lead to 1,585 pounds. Engineering estimates indicate 2.7 pounds of lead were released to the air as a point source and that 1,766 pounds of lead were applied to circuit boards.

The company's Form S for lead in reporting year 2010 is on the following page:

Formula: If:

**(previous year's use)*0.9 < (reporting year's use) < (previous year's use)*1.1
Then: the use of the chemical did not change by 10%.**

2009 use (3,436 lbs) * 1.1 = 3,779.6 lbs

2009 use (3,436 lbs) * 0.9 = 3,092.4 lbs

2010 Use = 3,354 lbs. However, toxics use reduction was implemented in the form of a dross control program.

4d1. **CC-08**

4d2. **D**

4d3a. **50 (Improved Operations and Maintenance), 68 (Production increased)**

4g. **No.**

4h. **Yes. (Toxics use reduction was implemented AND byproduct generation decreased by more than 10%).**

Formula: If:

**(previous year's byproduct generation) * 0.9 < (reporting year's byproduct generation) < (previous year's byproduct generation) * 1.1
Then: byproduct generation of the chemical did not change by 10%.**

2009 byproduct generation (1,829.5 lbs) * 1.1 = 2,012.5 lbs

2009 byproduct generation (1,829.5 lbs) * 0.9 = 1,646.6 lbs

2010 byproduct generation = 1,587.7 lbs.

4i1. **CC-08.**

4i2. **D**

4i3. **50 (Improved Operations and Maintenance), 68 (Production increased)**

4l. **No.**

4m. **Please note that lead use and byproduct generation decreased (by 2% and 13%, respectively), while production increased by 10%. We recycle our lead dross off-site.**

Example #3 Product reformulation and on-site recycling

The Green Paint Company (Facility ID 745978) prides itself in the manufacture of environmentally friendly paints. It manufactures a line of VOC compliant solvent based paint in production unit #1 for use in metal finishing applications that contain xylene mixed isomers (CAS 1330-20-7). In reporting year 2009 it processed 126,541 pounds of xylene mixed isomers (including reclaimed solvent) and produced 56,237 gallons of metal finishing paint.

In the following reporting year 2010, the company manufactured/compounded (process code GG-01) a reformulated version of the metal finishing paint using a different resin that required the use of approximately 12% less xylene mixed isomers and no additional solvents. The company produced 58,116 gallons of the reformulated metal finishing paint using only 115,376 pounds of xylene mixed isomers. Fugitive emissions of xylene mixed isomers during processing operations were estimated at 1,135 pounds in reporting year 2009 and 1,098 pounds in reporting year 2010. The company has a non-integral on-site recycling solvent still (DD-02) that reclaimed approximately 800 pounds each year of xylene mixed isomers from processing operations. The amount of reclaimed xylene is included in the total facility-wide usage numbers stated above. The company shipped off-site 2 drums of hazardous waste in each year that it estimated contained a total of 250 pounds of xylene mixed isomers in reporting year 2009 and 225 pounds in reporting year 2010.

The company's Form S for xylene mixed isomers in reporting year 2009 is:

1d.	126,541 lbs	Processed
1f.	2,185 lbs	Generated as Byproduct
1g.	125,156 lbs	Shipped in or as product
2a.	800 lbs	Chemical was recycled on site

The company's Form S for xylene mixed isomers in reporting year 2010 is on the following page:

GG-01 i.1.	D 2.	20 3a.	3b.	3c.
j.1.	2.	3a.	3b.	3c.
k.1.	2.	3a.	3b.	3c.

l. Are there more production units that use this chemical? Yes No

m. You may add any comments or explanations regarding chemical use and/or byproduct generated in this production unit, chemical use in waste treatment (from Section 3), and non-routine occurrences at your facility (from Section 2).

The use and byproduct generation of xylene (mixed isomers) decreased even with an increase in business. We reformulated our metal finishing line of paint that requires the use of approximately 12% less xylene per gallon of paint produced.

Solution for Problem #3:

Reporting Year: **2010**

Facility Name: **Green Paint Company**

DEP Facility ID Number: **745978**

Chemical Name: **Xylene mixed isomers**

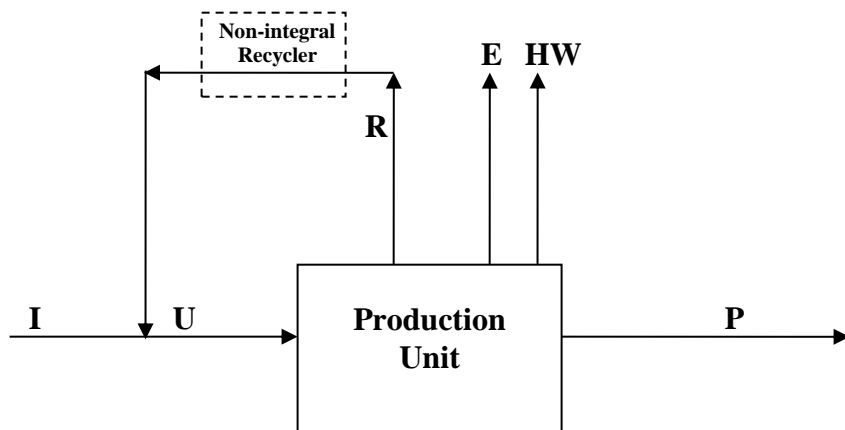

Section 1: Facility wide use of Listed Chemical

1a. **1330-20-7**

1b. **Xylene mixed isomers**

1d. **115,376 lbs** **Processed** **(given)**

1f. **2,123 lbs** **Generated as Byproduct**

I = Initial input = 115,376 lbs used – 800 lbs recycled = 114,576 lbs. It states in the problem that “The amount of reclaimed xylene is included in the total facility-wide usage numbers stated above” – therefore, the amount of nonrecycled xylene must be less than that used.

U = Used at facility = 115,376 lbs (given in problem)

P = Amount shipped in product = 115,376 lbs used (U) – 1,098 lbs fugitive emissions(E) – 225 lbs hazardous waste (HW) = 114,043 lbs

HW = Hazardous Waste = 225 lbs disposed of in drums

E = Fugitive emissions = 1,098 lbs

R = Non-integrally recycled xylene = 800 lbs

Total byproduct = 800 lbs (recovered by non-integral onsite recycling) + 1,098 lbs released as fugitive emissions + 225 lbs hazardous waste = 2,123 lbs

1g. 114,053 lbs Shipped In or As Product

115,376 lbs used (includes recycled xylene as stated in problem) – 1,098 lbs fugitive emissions – 225 lbs hazardous waste = 114,053 lbs.

Section 2: Materials Balance

2a. 800 lbs Chemical Was Recycled Onsite

2f. No

Section 3: Chemicals Used in Waste Treatment Units

3a. No

Section 4: Toxics Use by Production Unit

4b. **4. > 100,000 lbs. ≤ 500,000 lbs.**

4c. **Yes – Toxics use reduction was implemented.**

Formula: If:

$(\text{previous year's use}) * 0.9 < (\text{reporting year's use}) < (\text{previous year's use}) * 1.1$

Then: the use of the chemical did not change by 10%.

2009 use (126,541 lbs) * 1.1 = 139,195 lbs

2009 use (126,541 lbs) * 0.9 = 113,887 lbs

2010 Use = 115,376 lbs. However, toxics use reduction was implemented through product reformulation.

4d1. **GG-01**

4d2. **D**

4d3a. **20 (Product reformulation)**

4g. **No.**

4h. **Yes – Toxics use reduction was implemented.**

Formula: If:

$(\text{previous year's byproduct generation}) * 0.9 < (\text{reporting year's byproduct generation}) < (\text{previous year's byproduct generation}) * 1.1$

Then: byproduct generation of the chemical did not change by 10%.

2009 byproduct generation (2,185 lbs) * 1.1 = 2404 lbs

2009 byproduct generation (2,185 lbs) * 0.9 = 1967 lbs

2010 byproduct generation = 2,123 lbs. However, toxics use reduction was implemented.

4i1. **GG-01.**

4i2. **D**

4i3. **20 (Product reformulation)**

4l. **No.**

4m. **The use and byproduct generation of xylene mixed isomers decreased even with an increase in business. We reformulated our metal finishing line of paint that requires the use of approximately 12% less xylene per gallon of paint produced.**

Example #4 Web coating improved cleaning operation with chemical substitution

Web Coating PST Company (Facility ID 996492) offers an array of solvent-based coating services and products. The company uses a thermal oxidizer to destroy the half-dozen different VOCs the company uses to apply adhesives (process code AA-03) and apply other solvent based coatings (process code AA-03). In reporting year 2009 the facility-wide usage of methyl ethyl ketone (MEK - CAS 78-93-3) was 226,541 pounds. It used 125,789 pounds of MEK in an adhesive (production unit #3) applied to 1.2 million square yards of product and the remaining 100,752 pounds of MEK in facility-wide equipment clean up (process code FF-01) operations (production unit #9).

The company's Form S for methyl ethyl ketone in reporting year 2009 is:

- 1e. 226,541 lbs Otherwise Use
- 1f. 226,541 lbs Byproduct

In reporting year 2010 the company implemented a number of changes to its equipment clean-up operations. It began substituting a non-reportable terpene-based alternative for clean-up of several different coatings. It adjusted the dams in the coater reservoir (process code AA-03) to decrease the amount of adhesive leaking past the dam, reducing clean-up needed. It also provided worker training on using mechanical scraping and wiping prior to solvent application in roller and equipment clean-up. The company will be evaluating the installation of a centralized cleaning unit and the possibility of on-site solvent recycling in reporting year 2010.

In reporting year 2010 the company used 123,642 pounds of MEK in production unit #3 and produced 1.16 million yards of product. It used only 61,267 pounds of MEK in clean-up operations, even though they produced a comparable amount of product facility-wide as in reporting year 2009. The most significant reductions of MEK in clean-up operations (production unit #9) in order of descending importance are: the use of a terpene cleaner alternative, dam adjustment, worker training, and better use of mechanical scrapers.

The company's Form S for methyl ethyl ketone in reporting year 2010 is on the following page:

Chemical Name: **Methyl Ethyl Ketone (MEK)**

Section 1: Facility wide use of Listed Chemical

1a. **78-93-3**

1b. **Methyl Ethyl Ketone (MEK)**

1e. **184,909 lbs** **Otherwise Used**

Total use = Amount used in P.U. #3 (123,642 lbs) + Amount used in P.U. #9 (61,267 lbs) = 184,909 lbs

1f. **184,909 lbs** **Generated as Byproduct**
(Assumes all solvent evaporates from product)

Section 2: Materials Balance

2f. **No**

Section 3: Chemicals Used in Waste Treatment Units

3a. **No**

Section 4: Toxics Use by Production Unit – Production Unit #3

4a. **Production Unit #3**

4b. **4. > 100,000 lbs. ≤ 500,000 lbs.**

4c. **No.**

Formula: If:

$(\text{previous year's use}) * 0.9 < (\text{reporting year's use}) < (\text{previous year's use}) * 1.1$

Then: the use of the chemical did not change by 10%.

2009 use (125,789 lbs) * 1.1 = 138,368 lbs

2009 use (125,789 lbs) * 0.9 = 113,210 lbs

2010 Use = 123,642 lbs. No toxics use reduction was implemented for this production unit.

4g. **No.**

4h. **No.**

Formula: If:

$(\text{previous year's byproduct generation}) * 0.9 < (\text{reporting year's byproduct generation}) < (\text{previous year's byproduct generation}) * 1.1$

Then: byproduct generation of the chemical did not change by 10%.

2009 byproduct generation (125,789 lbs) * 1.1 = 138,368 lbs

2009 byproduct generation (125,789 lbs) * 0.9 = 113,210 lbs

2010 byproduct generation = 123,642 lbs. No toxics use reduction was implemented for this production unit.

4i. **Yes.**

Section 4: Toxics Use by Production Unit – Production Unit #9

4a. **Production Unit #9**

4b. **3. > 10,000 lbs. ≤ 100,000 lbs.**

4c. **Yes.**

Formula: If:

(previous year's use)*0.9 < (reporting year's use) < (previous year's use)*1.1

Then: the use of the chemical did not change by 10%.

2009 use (100,752 lbs) * 1.1 = 110,827 lbs

2009use (100,752 lbs) * 0.9 = 90,677 lbs

2010 Use = 61,267 lbs.

4d1. **FF-01.**

4d2. **D**

4d3a. **10**

4d3b. **50**

4e1. **AA-03**

4e2. **D**

4e3a. **50**

4g. **No.**

4h. **Yes.**

Formula: If:

(previous year's byproduct generation) * 0.9 < (reporting year's byproduct generation) < (previous year's byproduct generation) * 1.1

Then: byproduct generation of the chemical did not change by 10%.

2009byproduct generation (100,752 lbs) * 1.1 = 110,827 lbs

2009 byproduct generation (100,752 lbs) * 0.9 = 90,677 lbs

2010 byproduct generation = 61,267 lbs.

4i1. **FF-01.**

4i2. **D**

4i3a. **10**

4i3b. **50**

4j1. **AA-03**

4j2. **D**

4j3a. **50**

4l. **No.**

4m. **We substituted a less toxic terpene for MEK in clean-up operations. We also made adjustments to operating equipment resulting in less equipment requiring adhesive removal in clean-up operations.**

Appendix D: Common Reporting Errors

1. The toxics use report is missing forms.

A complete toxics use report includes the following:

- ✓ Form S Cover Sheet
- ✓ Form S for each chemical
- ✓ Form R for each chemical (or Form A, if applicable)
- ✓ Fee worksheet

Incomplete TURA reporting may result in late fees, enforcement and fines. **Each facility must file one Form S cover sheet for the facility as a whole. For each chemical reported, a Form R and Form S must be completed.** For ease of review, please place the Form R on top of the Form S for each chemical reported

2. Total chemical use as reported in Sections 1 c, d, and e of the Form S is not equal to the sum of the amounts generated as byproduct (Section 1 f) and shipped in product (Section 1 g).

Section of the report that may need correcting: FORM S: Section 1: Facility-wide Use of Chemical

Generally, there is a materials balance between chemical inputs and outputs on a facility-wide basis:

manufactured + processed + otherwise used = byproduct + shipped in product

If this is not the case on all of your forms, you should have checked one of the explanations (i.e., chemical was recycled on-site) in Section 2 on the Form. Otherwise, your materials accounting for the chemical may need to be checked.

3. The amount reported as byproduct on the Form S is *less than* the quantities reported in Section 8 (Source Reduction and Recycling Activities) of the Form R.

Sections of the report that may need correcting: FORM S: Section 1, item f: Facility-Wide byproduct generated and/or FORM R: Sections 5 and 6.

Byproduct will usually be equal to, or exceed, transfers and releases, since byproduct is the total quantity of waste that is generated during the production process calculated **before** it has been treated. The only time byproduct is less than transfers and releases is when some byproduct is reported as product on the Form S.

4. The amount reported as byproduct on the Form S is *greater than* the quantities reported in Section 8 (Source Reduction and Recycling Activities) of the Form R when there is no on-site energy recovery, recycling, or destructive treatment.

Sections of the report that may need correcting: FORM S: Sections 1 item f: Facility-Wide byproduct generated, Section 2: Materials Balance and/or FORM R: Section 7.

Byproduct is the total quantity of waste that is generated during the production process, calculated **before** it has been treated. If a treatment system destroys some or all of the byproducts, or some of the byproducts are recycled, the reported byproducts will be greater than releases and transfers off-site. If there is no destructive treatment (including energy recovery), on-site recycling, or byproduct reported as product, then total byproduct on the Form S will be equal to Section 8 of the Form R.

5. The production ratio in Section 1.i of the Form S is reported as <0.2 or >10.

This is the same production ratio that is reported on the Form R. It is the current year production amount in those production units in which the chemical is used, divided by the previous year's production level. *Note: The production ratio should never be a negative number. If the production level decreased from the previous year, the production ratio should be a decimal number less than one (e.g., 0.80 means that the production level in the reporting year was 80% of the production in the previous year). If the production level has increased from the previous year, the production ratio should be a decimal number greater than one (e.g., 1.2 means that the production level in the reporting year was 20% greater than the production level in the previous year).*

6. A facility does not meet the requirements for filing a State Only Form A

A facility may only use a Form A, IF the total of the amount treated, recycled, disposed, released, used for energy recovery onsite and offsite IS LESS THAN 500 pounds. These volumes correspond to the sum of amounts reportable for data elements in Section 8, the summary of the report: Section 8.1 (quantity released), Section 8.2 (quantity used for energy recovery onsite), Section 8.3 (quantity used for energy recovery off-site), Section 8.4 (quantity recycled onsite), Section 8.5 (quantity recycled off-site), section 8.6 (quantity treated onsite), and Section 8.7 (quantity treated off-site). If more than a total of 500 pounds is reported in Section 8, the facility must report a State Only Form R. If a facility does not meet these requirements and uses a Form A, then MassDEP may follow up with an enforcement action.

Appendix E: Questions and Answers

GENERAL REPORTING QUESTIONS

1. What happens if we reported last year but are exempt this year?

If your facility does not have to report this year but reported in a previous year, MassDEP recommends that you notify MassDEP in writing and explain why. This will help MassDEP distinguish facilities that are exempt from those that are out of compliance. The Form S Cover Sheet has a section that you may complete if your facility is newly exempt from reporting. You also may send a letter to MassDEP.

2. When should a plan summary be submitted?

Facilities must prepare or update their Plans in even-numbered calendar years only. A plan summary, resource conservation summary, or EMS progress report must be submitted to MassDEP by July 1st of the even-numbered year.

3. How can I file a trade secret claim?

If you are making a trade secret claim in your toxics use report, please call MassDEP's TURA Program at 617-292-5711 to request the "Trade Secret Special Instructions".

WASTE TREATMENT CHEMICALS

4. If I claim my whole facility as a production unit, can I include my waste treatment system as part of my production unit?

No. Waste treatment units are not considered manufacturing processes and therefore cannot be included in production units. Companies should track chemicals used in waste treatment units separately from those used in production units. Companies should report chemical use associated with waste treatment operations in Section 3 of the Form S, Chemicals Used in Waste Treatment Units.

5. What if my waste treatment unit is “hard-piped” or “integral” to my production process, can I then consider it part of my production unit?

No. Waste treatment units are not considered production processes even if they are “integral” to the manufacturing process. Chemicals used in them are reported separately from production units.

6. If I previously reported my waste treatment unit as part of my production unit, what should I do to correct my reporting?

You should consider all waste streams previously treated by your waste treatment unit as byproducts from production units in your facility. These byproducts should be allocated back to the production unit where they were generated. Chemicals used to perform the waste treatment operations (for example, acids and bases used for pH adjustment) can be reported separately in Section 3 of the Form S.

7. When I dump my spent acid process bath, I use it in my waste treatment, as is, without further treatment. Can I report this as byproduct as product?

No. Byproduct as product that is used on site must be used in a manufacturing process to be considered byproduct as product. Amounts of spent acid and base baths that are used to adjust pH in waste treatment operations can be used to reduce facility-wide use of the reportable chemicals. They are still considered byproducts when they leave the production unit.

TUR PLANNER CERTIFICATION

8. How do I obtain an application for certification or recertification as a TUR Planner?

Please call 617-292-5541 for a "Planner Certification Application" or "Planner Recertification Application," depending upon your situation. You also can download the application from MassDEP's web site at www.mass.gov/dep/toxics/approvals/turforms.htm#cert

9. Once I receive the TUR Planner application, if I have questions concerning filling it out, can someone assist me?

Yes. Please call the MassDEP Planner Certification Program at 617-292-5541.

10. Can a planner receive credit for applicable courses taken outside the TURI and OTA curriculum?

Yes, as long as the courses fit the regulatory requirements found in 310 CMR 50.58. Courses offered by either OTA or TURI are usually pre-approved by MassDEP for use by TUR Planners seeking recertification credit. However, Planners do not receive credit by simply attending the pre-approved course; they must apply to MassDEP using the TUR Planner Continuing Education Credit Pre-approval Form to receive the credit.

Any organization wishing to offer courses pre-approved for credit for TUR Planners may contact the MassDEP Planner Program at 617-292-5541 for more information. MassDEP normally requests some tangible information (e.g., a syllabus, course description and length of time) prior to pre-approving a course for Planner credit. Once again, each Planner attending a pre-approved course and seminar must apply to MassDEP in order to receive the credit.

11. How do I find out what courses TURI is offering or planning to offer which are suitable for credit toward recertification?

Information on courses offered by TURI is available on the TURI web site at www.turi.org.

12. Once I take a course approved by MassDEP for TUR Planner credits, do I still need to apply to MassDEP for credit?

Yes. MassDEP may give a course instructor permission to state that his or her course has been approved by MassDEP for use by TUR Planners for recertification credit. However, in order to receive the credit you must apply to MassDEP. You may wait until you have all the required credits or you may use the TUR Planner Continuing Education Credit Pre-approval Form to receive credit immediately.

13. Is there a rollover of recertification credits into the next 2-year period allowed for those TUR Planners who have accumulated more than the required credits in any given certification and recertification period?

Generally no, since allowing a rollover of extra credits into the next recertification period would defeat the basic purpose of recertification, which is to keep TUR Planners up-to-date on current TUR planning techniques. However, exceptions may be made in certain situations. For example, an exception could be made for obtaining extra credits by taking a relevant TUR course during the end of a TUR Planner's certification or recertification period. In this case, some of the surplus credits could possibly be used toward the next recertification period.

14. What are the new TUR Planner requirements for certifying Resource Conservation (RC) Plans and Environmental Management Systems (EMS)?

The requirements can be found on MassDEP's web page: <https://www.mass.gov/media/1651176>

15. Do TUR Planners need additional credits to sign RC Plans and EMS plans?

No, any RC and EMS credits obtained count toward the total number of credits required for recertification.

16. When are TUR Planner examinations held?

There are no set dates for TUR Planner examinations. MassDEP generally offers the examination once each year during late fall (usually in November), after TURI's planner course has been completed. All eligible TUR Planners are notified by mail. Everyone who has taken the TURI planner course since the last planner examination is notified by MassDEP of the upcoming examination. In addition, all examinees who have failed the examination in the past are notified by MassDEP. TURI also announces the pending examination in its planner classes.

Appendix F: Chemicals that Have Been Delisted Under TURA

The following chemicals have been delisted from TURA (but in certain cases are reportable under EPCRA):

Reporting Year/Chemical Delisted	Reason/Note
1994	
Barium Sulfate	EPCRA delisting and not CERCLA reportable
All copper phthalocyanine compounds that are substituted with only hydrogen and/or chlorine and/or bromine (delisted from the copper compounds category)	EPCRA delisting and not CERCLA reportable
High molecular weight glycol ethers	EPCRA delisting and not CERCLA reportable
1995	
Certain Metal Alloys (refer to Appendix B, Guidance for TURA Reporting and Planning for Certain Metals and Metal Alloys)	TURA Administrative Council delisting
Chromium (III) Oxide from chromium compounds category	TURA Administrative Council delisting
Ammonium Sulfate Solution (CAS#7783-20-2)	EPCRA delisting and not CERCLA reportable
Ammonium Nitrate Solution (CAS#6484-52-2)	EPCRA delisting and not CERCLA reportable
1996	
Hydroquinone (except for the manufacture of the chemical)	TURA Administrative Council delisting
Acetic Acid at concentrations of 12% or less	TURA Administrative Council delisting
Di-(2-ethylhexyl)adipate (DEHA) (CAS#103-23-1)	EPCRA delisting and not CERCLA reportable

1997

Zinc Oxide from zinc compounds category	TURA Administrative Council delisting
Radionuclides	TURA Administrative Council delisting
2-bromo-2-nitropropane (Bronopol) (CAS#52-51-7)	EPCRA delisting and not CERCLA reportable
2, 6 dimethylphenol (CAS# 576-26-1)	EPCRA delisting and not CERCLA reportable
Carbamate waste category	CERCLA delisting and not EPCRA reportable

1998

Silver-Copper Alloy	TURA Administrative Council delisting
---------------------	---------------------------------------

1999

Pure Copper and Pure Silver	TURA Administrative Council delisting
Caprolactum (CAS# 105602)	CERCLA delisting and not EPCRA reportable

2000

Zinc Stearate from zinc compounds category	TURA Administrative Council delisting
--	---------------------------------------

2010

Adipic Acid	TURA Administrative Council delisting
Ammonium Bicarbonate	TURA Administrative Council delisting
Ammonium Chloride	TURA Administrative Council delisting
Ammonium Sulfamate	TURA Administrative Council delisting
Amyl Acetate	TURA Administrative Council delisting
Fumaric Acid	TURA Administrative Council delisting
Maleic Acid	TURA Administrative Council delisting

Appendix G: Integral Recycling Guidance Under The Toxics Use Reduction Act

Introduction

The Toxics Use Reduction Act (TURA) identifies six (6) techniques which constitute toxics use reduction. The sixth technique is “recycling, reuse or extended use of toxics by using equipment or methods which become an integral part of the production unit of concern, including but not limited to filtration and other closed loop methods.” TURA also states, in part, that “toxics use reduction shall not include... off-site or out-of-production unit waste recycling.” This guidance provides detail on what types of activities are considered “integral recycling” under TURA.

This Appendix also provides general guidance on how each activity is regulated under MassDEP’s hazardous waste regulations (310 CMR 30.000). The reader must refer to the specific hazardous waste regulations, separate from this TURA guidance, to assure operational compliance with hazardous waste requirements. Critical terms such as “integral,” “production process,” “closed loop,” “totally enclosed,” and others are used differently under different statutes. As such, people must be careful to consider differing requirements to avoid non-compliance problems. Companies should check the regulations themselves or contact MassDEP at 617-292-5711 for further compliance assistance, if needed.

Should this integral recycling guidance result in significant reductions in your facility-wide use or byproduct figures, please contact MassDEP at 617-292-5711. Such significant changes in reporting can skew TURA trend data analysis and your notification to MassDEP will allow us to adjust our figures to prevent over counting of actual reductions.

DEFINITION

Activities Considered “Integral Recycling” Under This Guidance

- In order for an activity to qualify as “integral recycling” the material must be recycled or reused, not treated. From the TURA perspective, this is important because the statutory language refers to “recycling, reuse or extended use of toxics...” and also because the statutory definition of toxics use reduction specifically excludes anything that is, or that promotes “end-of-pipe treatment.”

If the recycling equipment and piping are permanently connected to a single production unit, the operation is integral. Also, if the recycling equipment is connected via detachable* hoses to a single production unit, the operation is integral.

- ❑ Detachable*, portable recycling equipment, directly connected to the production unit while the recycling equipment is in operation, is considered integral. There must be a sealed connection while the unit is in operation.
- ❑ If a manufacturing process includes a directly connected holding tank as part of its production unit, and the recycling unit is directly connected to the tank, this qualifies as integral recycling under this policy.

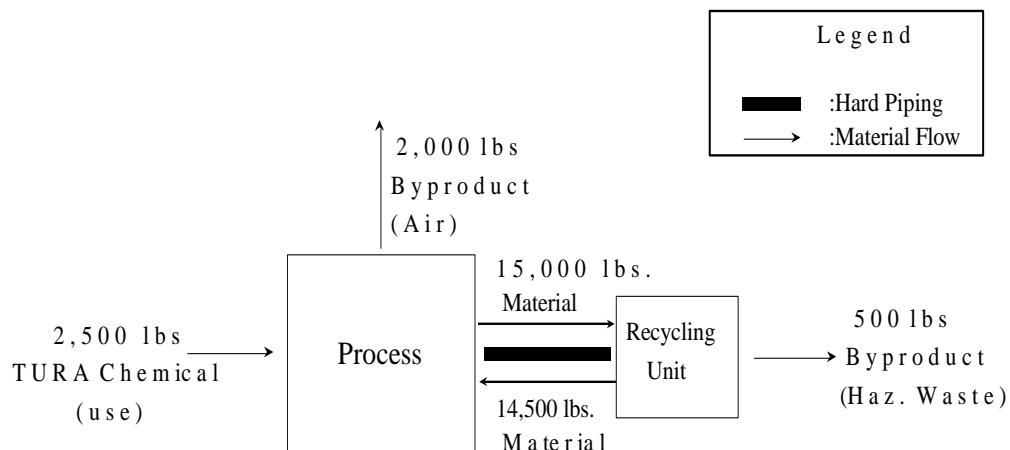

* Whenever detachable pipes are used in conjunction with a recycling unit, a written spill prevention plan must be prepared and kept on file to minimize worker exposure and to prevent spills and leaks when connecting, disconnecting, and operating the recycling unit. This spill prevention plan minimizes any increased risk of worker exposures that may arise from this expanded definition of integral recycling under TURA. TURA filers who do not wish to prepare and keep on file this spill contingency plan should consider the recycling unit (connected via detachable hoses) non-integral under TURA and report accordingly.

INTEGRAL RECYCLING EXAMPLES

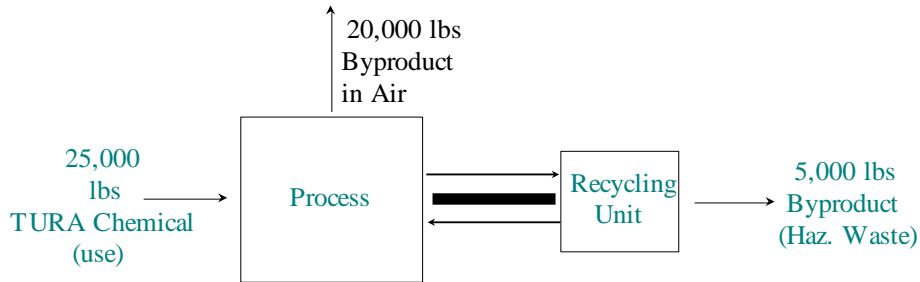

✓ Example: 1

A recycling unit which is hard-piped in the process qualifies as integral. The recycling unit is totally enclosed during operation. (Totally enclosed recycling units are units that have been designed, constructed, and operated to prevent spills, leaks or emissions of hazardous materials to the workplace and environment.)

A. This diagram illustrates the materials accounting and quantities generated each time the reportable chemical is an input to this process. (For this example, it occurs ten times each year.)

B. This diagram shows quantities reported annually for this chemical which are integrally recycled in this process.

Description of example process: As shown in diagram A, ten times a year 2,500 lbs of virgin chemical is fed into the process to supplement the 14,500 lbs of integrally recycled chemical which is reintroduced to the process on the same schedule. While parts are being processed using each of ten batches of chemical, 2,000 lbs of byproduct is released into the air. When each batch of chemical is spent, it is pumped through the integrally connected recycling unit which produces 500 lbs of byproduct as hazardous waste per batch. The quantities in diagram B show the yearly amounts of byproduct produced and material processed. Because the unit is integrally connected the chemical recycled is not reported as an input to the process, and spent chemical piped to the recycling unit is not considered byproduct. If any of the recycled solvent cannot be used in the process, and is shipped off-site for reuse without any treatment or recovery, it would be considered byproduct as product and reported in Section 1 item g. of the Form S “Shipped in or as Product.” (See section on Byproduct as Product, p.G-6.)

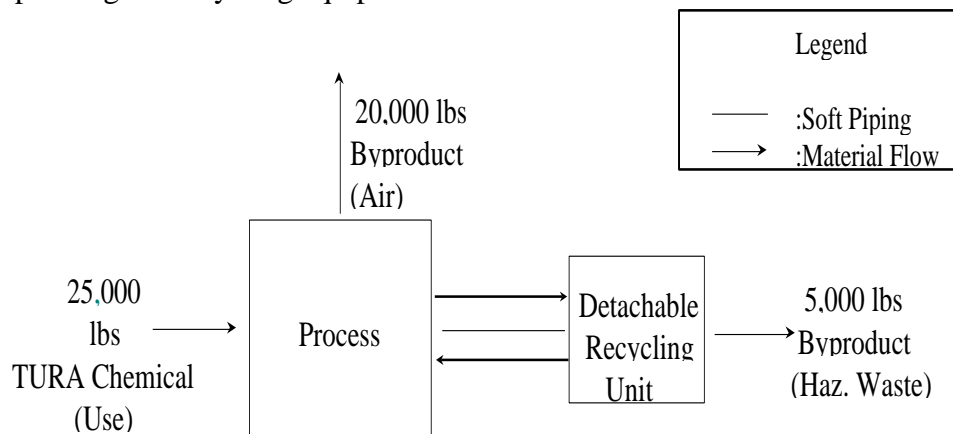

For this example of Integral Recycling, the Form S, Section 1 would be filled out as follows:

- | | | | |
|------------------------------|---------------|----------------------------|---------------|
| c. Manufactured: | 0 | d. Processed: | 0 |
| e. Otherwise Used: | 25,000 | f. Generated as Byproduct: | 25,000 |
| g. Shipped in or as Product: | 0* | | |

** If any integrally recycled material is shipped as product (byproduct as product), item g. would reflect that quantity.*

✓ Example: 2

To qualify as integral recycling, the portable recycling unit must be connected while the recycling unit is in operation via detachable couplings that are appropriate for such use and perform similarly to hard piping. The recycling unit is totally enclosed during operation. A written spill prevention plan must be developed to minimize risk of worker exposure and to prevent spills or leaks when connecting and disconnecting or operating the recycling equipment.

Description of example process: The quantities in the diagram show the yearly amounts of byproduct produced and material processed. Because the unit is integrally connected, the recycled chemical is not reported as an input to the process, and spent chemical piped to the recycling unit is not considered byproduct. If any of the recycled solvent cannot be used in the process, and is shipped off-site for reuse without any treatment or recovery, it would be considered byproduct as product and reported in section 1.2g of the Form S “Shipped in or as Product.” (See section on Byproduct as Product, p.G-6.)

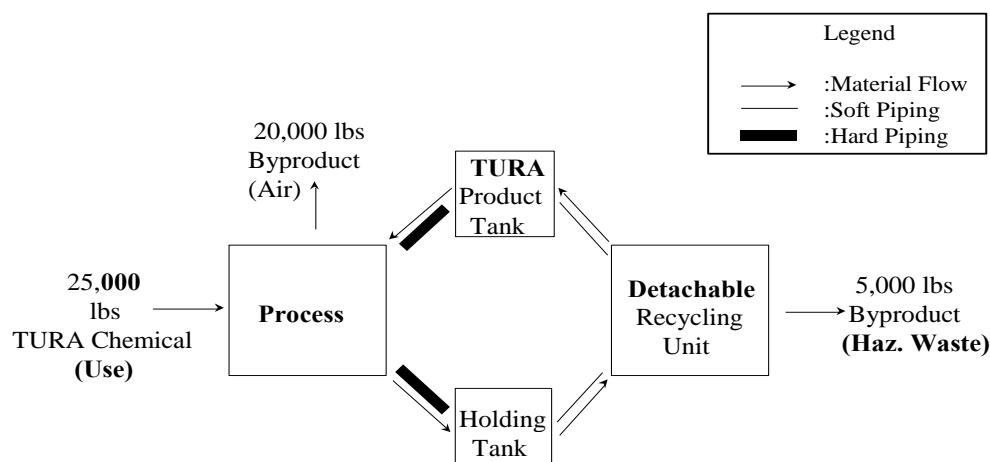

For this example of Integral Recycling, the Form S Section 1 would be filled out as follows:

- | | | | |
|------------------------------|---------------|----------------------------|---------------|
| c. Manufactured: | 0 | d. Processed: | 0 |
| e. Otherwise Used: | 25,000 | f. Generated as Byproduct: | 25,000 |
| g. Shipped in or as Product: | 0* | | |

** If any integrally recycled material is shipped as product (byproduct as product), item g. would reflect that quantity.*

✓ Example: 3

A recycling process which utilizes a holding tank, piped to the process, to store spent chemicals which are then recycled via either a permanent or detachable recycling unit, qualifies as integral. The recycling unit must be connected to the holding tank while the unit is in operation. The unit must also be totally enclosed while in operation (as explained in example 1, p.G-2). A written spill prevention plan must be developed to minimize risk of worker exposure, to prevent spills or leaks when connecting and disconnecting or operating the recycling equipment.

Description of sample process: The quantities in the diagram show the yearly amounts of byproduct produced and material processed. Because the unit is integrally connected, the recycled chemical is not reported as an input to the process and spent chemical piped to the recycling unit, is not considered byproduct. If any of the recycled solvent cannot be used in the process, and is shipped off-site for reuse without any treatment or recovery, it would be considered byproduct as product and reported in Section 1 item g. of the Form S “Shipped in or as Product.” (See section on Byproduct as Product, p.G-6.)

For this example of Integral Recycling, the Form S, Section 1 would be filled out as follows:

c. Manufactured:	0	d. Processed:	0
e. Otherwise Used:	25,000	f. Generated as Byproduct:	25,000
g. Shipped in or as Product:	0*		

** If any integrally recycled material is shipped as product (byproduct as product), Section 1 item g. would reflect that quantity.*

BYPRODUCT AS PRODUCT

A byproduct that is product means a byproduct that is used as a raw material without treatment or processing. If a byproduct is treated before it is used as a raw material, then it is not a product. For TURA purposes, byproduct as product should be listed as a product of the production unit. For example, some recycled paints or solvents can be sold to buyers who can use them as they are. While these would not be counted as byproducts, they would need to be counted in the amount of the chemical shipped off-site as product.

BYPRODUCT AS PRODUCT REPORTING UNDER TURA

Chemical amounts being reported as byproduct as product must be listed in the Form S cover sheet in section 4 as a second product for that production unit. Therefore, at least two products will be listed in any production unit that produces byproduct as product.

01
a. Production Unit #

is this production unit IN USE for the reporting year of this submittal?

yes no

b. Describe the Process:

Degreasing metal parts

c. Describe the Product:

Cleaned metal parts and recycled solvent

Enter up to (four) 4 six-digit NAICS Codes that best describe the Product from this Production Unit:

332312
d. NAICS Code

e. NAICS Code

f. NAICS Code

g. NAICS Code

h. Check the appropriate description for the unit of product:

area dollar hours kilowatt length N/A number volume weight

NON-INTEGRAL RECYCLING (ON-SITE)

Activities where spent material is removed from the process and transferred into barrels or other containers are not considered integral under this policy. To be considered integral, spent material from the production process must be pumped directly into the recycling unit or into a directly connected holding tank, and then to a directly connected recycling unit.

✓ Example: 4

Non-integral, On-Site Recycling Reporting: Many companies have non-integral recycling operations on-site. Their processes include drumming and transporting the material to a different location in the plant at some point during the operation. Although these recycling processes are not considered “integral recycling,” TURA and this guidance recognize on-site, non-integral recycling as follows: Companies practicing on-site, non-integral recycling are required to count the recycled chemical as byproduct each time it exits the production unit. Additionally, each time the recycled material is re-introduced as an input to the production unit, it should be added to chemical use quantities at the production unit level, but not to the facility-wide use levels. Therefore, any type of on-site recycling is not counted towards facility-wide use of the chemical, and will result in a reduction in the facility-wide total usage number.

Description of Sample Process: Each year, 25,000 lbs of virgin chemical plus 145,000 lbs of recycled chemical are added to the process (inputs). Each year 20,000 lbs of byproduct are released to the air and 150,000 lbs of spent chemical is drummed and brought to the on-site recycling unit. The recycling unit generates 5,000 lbs of hazardous waste. The quantities in the diagram show the yearly amounts of byproduct produced and materials processed. Because this is on-site non-integral recycling, the 145,000 lbs of recycled chemical is not counted towards facility-wide use, but is counted toward chemical use at the production unit level.

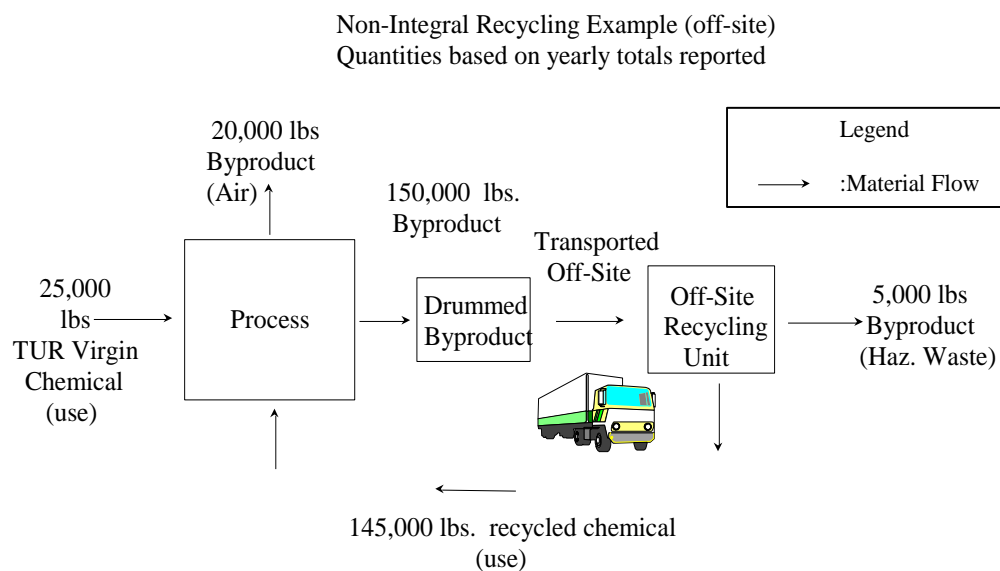

For this example of a company performing Non-Integral On-Site Recycling, the Form S, Section 1, would be filled out as follows:

- | | | | |
|------------------------------|--------|----------------------------|---------|
| c. Manufactured: | 0 | d. Processed: | 0 |
| e. Otherwise Used: | 25,000 | f. Generated as Byproduct: | 175,000 |
| g. Shipped in or as Product: | 0* | | |

This example, when compared to the non-integral off-site recycling example below, demonstrates how facility-wide input numbers are minimized with non-integral, on-site recycling. It should be noted on the Form S, in Section 2, that on-site recycling has affected the materials balance for this chemical.

✓ **Example: 5**

Non-Integral Off-Site Recycling Reporting: Activities where materials are sent off-site for recycling are not considered integral under this guidance. Materials recycled off-site and re-introduced into the process, must be counted as byproduct and use both at the facility-wide and production unit levels. This can add significantly to the amount of chemical brought on-site and reported as facility-wide chemical use.

Description of Example Process: Each year, 25,000 lbs of virgin solvent plus 145,000 lbs of recycled solvent are added to the process (inputs). Each year, 20,000 lbs of byproduct are released to the air and 150,000 lbs spent chemical is drummed and shipped off-site to a company which recycles spent solvent. This off-site recycling unit generates 5,000 lbs of hazardous waste. The quantities in the diagram show the yearly amounts of byproduct produced and material processed. Because of this off-site non-integral recycling, the recycled chemical, as well as the virgin chemical, must be counted as inputs to the process. Additionally, the spent chemical, as well as the byproduct emitted to the air, must be counted as byproduct. The 5,000 lbs of hazardous waste byproduct is neither generated nor reported by this facility.

For this example of a company performing Non-Integral Off-Site Recycling, the Form S, Section 1, would be filled out as follows:

- | | |
|---------------------------------|------------------------------------|
| c. Manufactured: 0 | d. Processed: 0 |
| e. Otherwise Used: 170,000 | f. Generated as Byproduct: 170,000 |
| g. Shipped in or as Product: 0* | |

HAZARDOUS WASTE SPECIFIC REQUIREMENTS

✓ Example 1: Integral Recycling

- The recycling unit is integral to the process, and therefore exempt from 310 CMR 30.000.
 - The recycling unit does not need a recycling permit.
 - The byproduct generated from the recycling unit is managed as:
 1. Hazardous waste, and as such, counts towards hazardous waste generator status
or
 2. Class A regulated recyclable material (notification “permit” required, 310 CMR 30.212)
-

✓ Example 2: Integral Recycling with Portable Recycling Unit

- The recycling unit is integral to the process, and therefore exempt from 310 CMR 30.000.
 - The recycling unit does not need a recycling permit.
 - The byproduct generated from the recycling unit is managed as:
 1. Hazardous waste, and as such, counts towards hazardous waste generator status
or
 2. Class A regulated recyclable material (notification “permit” required, 310 CMR 30.212)
-

✓ Example 3: Integral Recycling Incorporating Holding Tank

- The holding tank is regulated as a hazardous waste accumulation container, subject to generator standards for tanks (310 CMR 30.205(19)).
 - The facility’s generator status calculation includes the amount fed into the holding tank.
 - The recycling unit is regulated as a hazardous waste recycling unit, and therefore needs a Class A or Class B (4) recycling permit (310 CMR 30.212 or 30.213(4))
-

✓ **Example 4: On-Site Non-Integral Recycling**

- Hazardous waste regulations apply to the drummed byproduct.
- Rate of generation includes the amount of byproduct drummed.
- Hazardous waste recycling permit is required.

✓ **Example 5: Off-Site Non-Integral Recycling**

- Hazardous waste regulations apply to the drummed byproduct.
- Rate of generation includes the amount of byproduct drummed.
- Hazardous waste recycling permit is required for the generator and the recycling facility.

ASSOCIATED HAZARDOUS WASTE ISSUES

GENERAL COMPLIANCE ISSUES

RECYCLING VS. TREATMENT

In order for an activity to qualify as “integral recycling,” the material must be recycled or reused, not treated. From the TURA perspective, this is important because the statutory language refers to “recycling, reuse, or extended use of toxics...” and also because the statutory definition of toxics use reduction specifically excludes anything that is, or that promotes, “end-of-pipe treatment.” From the hazardous waste perspective, this is important because treatment activities require licenses under both M.G.L.c. 21C and RCRA.

In order to be consistent with RCRA, the following criteria apply when determining whether an activity constitutes recycling: *

- Is the secondary material as effective as the raw material it replaces?
- Can the secondary material be fed directly into the process or is reclamation required?
- How much of the secondary material is used as compared to the analogous raw material?
- Is the secondary material managed in a manner consistent with the raw material?
- Are the toxic constituents actually necessary to the product or are they just “along for the ride”

*These criteria are taken from the Federal Register (FR), 53 FR at 522, 52 FR at 17013 and 50 FR at 638.

INHERENTLY WASTE-LIKE MATERIAL

The preceding guidance does not apply to those hazardous wastes listed as F020, F021, F022, F023, F026, F028, since those hazardous wastes are inherently waste-like and must be managed as a hazardous waste, pursuant to the definition of hazardous waste contained at 310 CMR 30.000. Furthermore, those inherently waste-like wastestreams cannot be managed as regulated recyclable materials, since there is no exemption provided in 310 CMR 30.200 for those materials. However, there may be circumstances in which the “treatment that is integral...” exemption, cited in 310 CMR 30.000, might apply and in fact, exempt these wastes from hazardous waste regulations.

STATE-ONLY VS. EPA

Concerning other hazardous waste regulatory compliance issues, a TURA filer must keep in mind that since some hazardous waste activities are regulated on a state-only basis, for these wastes, MassDEP can exert a measure of discretion in policy-making. However, other activities are regulated by both MassDEP and EPA, and in these circumstances, MassDEP’s discretion is generally more limited to federal rulings. For example:

- Characteristic sludges and byproducts being reclaimed are regulated by MassDEP only, and can be managed as hazardous waste, or if being reclaimed, they can be managed as a regulated recyclable material.
- Listed sludges and byproduct being reclaimed are regulated by both EPA and MassDEP.
- Spent materials being reclaimed on-site are regulated by both EPA and MassDEP.

OTHER STATE AND FEDERAL LAWS OR REGULATIONS

This guidance does not relieve those responsible for these “recycling activities” from regulatory responsibility contained in any other applicable state or federal laws or regulations. It is incumbent upon the responsible parties to conduct the recycling activities at all times in a manner that is protective of public health, safety, and the environment. To that end, MassDEP reserves its rights pursuant M.G.L. c. 21C, and M.G.L. c. 21I, to review and evaluate any such activity, on a case-by-case basis, and to require persons or entities managing these activities to comply fully with these laws.

Appendix H: Guidance For Using TURA Production Process Codes

This appendix explains how to use the new standardized codes to describe the production processes included in your production unit(s).

Under TURA, the "production unit" [defined as the process(es) used to produce a product] is the basic unit for reporting and planning. In its regulations, MassDEP chose to give firms flexibility over how they designate their production units. The rationale was that firms are better suited to determine meaningful product and process combinations than are the regulators.

In TURA reporting, firms list their production units (as they chose to define them) in the Form S Cover Sheet -- identifying the products using one or more six-digit NAICS codes and describing the processes in their own words. MassDEP amended the TURA regulations (310 CMR 50.30) to incorporate reporting on production processes using generic codes.

This Appendix describes how and why the codes were developed and then explains how to use them to report information on the Form S Cover Sheet. (See "TUR Production Process Codes by Process Type" below for the annotated list of the codes.)

Do the codes require that a firm make changes in the way it defined its production unit?

No. The coding system is intended to maintain the traditional flexibility firms have been given in grouping products and processes into production units. No change in how firms define their production units is required. The codes are generic enough that most firms should only need a few codes to describe their processes.

Why were these codes developed?

The standardized process codes were developed, in large part, because of differences in the way similar processes were described by different companies. MassDEP wants to retain the flexibility given to firms in designating production units. We also need to identify, however, the similarities and differences in processes as part of potentially developing user segment regulations.

The coding system is intended to be used to group the 800+ processes reported each year into broad categories based on similarities and differences in such things as: 1) processes, 2) chemical use, 3) byproduct production, and 4) opportunities for TUR. Alpha-numeric codes have been assigned to each generic category.

✓ Example 1: Off-Site Non-Integral Recycling

Each year, a number of firms report deionization of water as a production unit, although the way they describe this process varies. Some refer to it as "D/I Unit," others report only the "regeneration of resins for deionization," etc.

These firms represent a variety of industries, including paper making, pharmaceuticals, electroplating, and co-generation of steam. With the coding system, these firms would uniformly report HH-01 for deionizing water. Once this code is entered into the computer system, MassDEP can run a report, for example, to determine what TUR techniques have been adopted. Any promising developments in one industry can be researched for potential applicability in other industries.

MassDEP has, in fact, seen examples where technology transfers look promising. One TURA filer, primarily a chemical manufacturer, uses electroplated copper powders or flakes as a component in its products. That firm has developed an electroplating process that eliminates the need to use cyanide compounds. Although the process is patented, its development in one industry suggests the potential for technology transfer to traditional electroplating firms.

How To Use the Production Process Codes

Shown below is an excerpt from the **Form S Cover Sheet** showing the top half of Section 4, and calls for identifying the production unit by number, describing the processes involved, describing the product etc.

Section 4: Facility-Wide Listing of Production Units

A PRODUCTION UNIT is best thought of as the combination of the process (or activities) used to produce a product or service and the product or service. In this section, please identify the PRODUCTION UNITS at the facility, then use the production unit number to report on chemical use in the Form S.

If there has been a substantial change in a PRODUCTION UNIT from the previous reporting year, the PRODUCTION UNIT must be given a new, unique number.

a. Production Unit #

b. Describe the Process:

is this production
unit IN USE for
the reporting year
of this submittal?

yes no

c. Describe the Product:

Enter up to four (4) six-digit NAICS Codes that best describe the Product from this Production Unit:

d. NAICS Code

e. NAICS Code

f. NAICS Code

g. NAICS Code

h. Check the appropriate description for the unit of product:

area dollar hours kilowatt length N/A number volume weight

Where the form calls for information concerning the process, a firm should describe any process step that involves a TURA-reported chemical as an input, output or throughput.

A firm need NOT describe a process step that does not involve a TURA chemical. For example, a juice manufacturer would not have to describe mixing as a process step unless a TURA chemical being reported this year was involved. Another manufacturer that mixed food grade acetic acid to produce salad dressing would report the mixing step.

MassDEP does not expect extremely detailed descriptions of process steps and in the past most firms have described their processes in sufficient detail. More specific descriptions, however, will help MassDEP identify similarities and differences in the production processes of firms.

✓ Example 2: Off-Site Non-Integral Recycling

Instead of describing process as "household appliance manufacturing," it would be more helpful if the firm reported "spray coating and assembly of household appliances."

After describing the process, a firm describes the product and enters the six-digit NAICS code(s) that best describes that product. Then the unit of product is described in narrative fashion. (See the reporting instructions for more detailed information on completing the first part of Section 4 of the Form S Cover Sheet.)

Using the standardized process codes

Shown below is that part of Section 4 that calls for firms to enter the appropriate standardized process codes.

Production Process Step Information For This Production Unit

- i. Enter the production process codes to identify the process steps that involve TURA-reportable chemicals as an input, output or throughput. (See the reporting guidance document for the list of production process codes and instructions on when a given code needs to be listed.)

1. _____ Process Code	2. _____ Process Code	3. _____ Process Code	4. _____ Process Code
5. _____ Process Code	6. _____ Process Code	7. _____ Process Code	8. _____ Process Code
9. _____ Process Code	10. _____ Process Code	11. _____ Process Code	12. _____ Process Code
13 _____ Process Code	14. _____ Process Code	15. _____ Process Code	16. _____ Process Code
17 _____ Process Code	18. _____ Process Code	19. _____ Process Code	20. _____ Process Code
21 _____ Process Code	22. _____ Process Code	23. _____ Process Code	24. _____ Process Code

To complete this part of the cover sheet, firms need to determine which production process code(s) best describe their activities. Note that the production process codes (which are listed in) have been divided into three groups.

Note: There are some firms that may have to review the codes in all the groups. This might occur, for example, with a textile manufacturer that not only dyes fabric but also formulates the dye using a chemical reaction.

Note: The examples and cross - references provided by MassDEP are based upon the agency's best understanding of production processes as described in TURA reports submitted in previous years.

With the first two groups, a distinction has been drawn between production processes generally used to provide services or make (or process) objects (Group 1) and those processes typically associated with the manufacture of chemicals (Group 2).

Group 1 contains processes that typically are used by firms that primarily make or process objects and goods (or provide services).

Group 2 is designed primarily for use by firms that manufacture or process chemicals. (Mainly firms in SIC code 28, 29, 30, some firms in 33 who recover metals, and chemical distributors.)

Group 3 lists miscellaneous processes that might be used by any firm, regardless of whether services are provided, goods are made, or chemicals produced.

DETERMINING WHICH PROCESS GROUP LIST TO USE

If your firm primarily makes or processes objects (or provides services) look first at the codes in Groups 1 and 3. If there are codes on these lists that adequately describe your processes, you need not evaluate or report any of the chemical process codes in Group 2.⁵ Similarly, a firm that primarily manufactures or processes chemicals should first look at Groups 2 and 3 for applicable codes.

If your firm makes and processes objects (or provides services) and there is no code in Group 1 or Group 3 that adequately describes your process, you should then check the Group 2 codes. There may be a generic chemical process code that you can use. If you have questions, you can call MassDEP at (617) 292-5711.

For many firms, using the process code lists should be straightforward. MassDEP does recognize, however, that questions and issues of interpretation of the codes may arise. To assist TURA reporters, MassDEP has included examples or other comments in the attached list of codes.

The examples and cross-references are intended **ONLY** as a guide; each filer is encouraged to use its own best judgment concerning which codes to use. There are, however, some general principles for using the production process codes.

⁵ Many process steps in **Group 1** are themselves chemical reactions. For example, electroplating is an oxidation/reduction reaction. An electroplating firm, however, would enter one of the codes for electroplating (AA-12 or AA-13, for example). The firm would NOT enter the **Group 2** code (EE-07) for oxidation/reduction reactions.

1. Each generic process code refers to the specific steps (or unit operations) normally associated with that process.

✓ Example: 3

A textile manufacturer reports "acid aging," not as a bleaching process but as a step by which dyes are chemically activated. That manufacturer would use the code AA-22 Pigmentation and Dyeing for "acid aging" and all other steps normally associated with dyeing.

2. If a number of process steps can be categorized by one code, that code should be entered **ONLY** once for a given production unit.

✓ Example: 4

A tool manufacturer cuts, drills, and turns metal to produce hand tools. Generally all those processes can be classed as BB-05 Removal by Mechanical Means (Gross Mass Removal). The code BB-05 would be entered once for all those operations if they all are included in a given production unit. (If the firm had a second production unit with the same three processes, BB-05 would be reported for that production unit as well.)

3. Use all the codes that apply.

✓ Example: 5

Electroplating as a generic process includes a product cleaning step. The appropriate code for electroplating should be reported, as well as the appropriate product cleaning code.

4. Using the "not otherwise specified" codes.

The production processes are generally placed in subgroups, such as the "Product Molding and Forming" subgroup which includes CC-01 (Casting and Molding), CC-02 (Extrusion and Drawing) CC-03 (Forging), etc.

In some groups, the last code contains the abbreviation N.O.S. for "not otherwise specified." This code should be used for processes that cannot be categorized into one of the codes above it in the subgroup.

What do I do if a process is not adequately described by a listed code?

After looking at Group 1 and 3 codes, a firm that makes or processes objects should next look at the Group 2 chemical reaction codes. If one of those codes apply, use it. If no code truly seems to apply, a firm should use its best judgment to determine which coded process is "most like" the activity being reported.

✓ Example: 6

In the plastics industry there is a relatively new process for forming products known as "pultrusion." With this process, heated plastic is pulled through a die that gives it a specific shape. Assume no existing code is applicable.

Looking over the **Group 1** list, however, the annotations indicate that CC-02: Extrusion and Drawing are processes that give a specific shape to a product by forcing it through a die. "Pultrusion" could be considered "most like" extrusion because a die is used to give shape to a product, even though the plastic is pulled, not pushed.

✓ Example: 7

A food manufacturer uses a TURA-reportable chemical to "fumigate" its facility. Assume that there is no code that covers this process. There are, however, two processes that are similar: FF-04: Equipment Cleaning (Solvent-Based) (includes sanitizing) and HH-02 Process Water Treatment – Biocides and Disinfection (which includes chlorination).

This firm would have to use its best judgment as to which code "fumigation" is most like. If the fumigant used is a solvent, the equipment cleaning code could be viewed as the most applicable. As this example illustrates, there is not necessarily any one "right" answer for which process code is most like "fumigation."

Reporting on the chemicals associated with a production unit

Each production unit may be associated with one or more chemicals. In the last part of section 4, firms list the particular chemical(s) that are associated with the given production unit. There is a space for the chemical name and the chemical abstract service (CAS) number. (If there is no CAS number, leave that line blank.) The form then asks whether the chemical listed is associated with all the process steps coded above. If so, check "YES" and no process codes need to be entered for the chemical. If the chemical is associated with some but not all of the processes, the appropriate process codes should be listed.

To illustrate Section 4 reporting, consider a firm that makes jewelry which reports two chemicals: trichloroethane (used to clean jewelry) and ammonia (used in etching).

The cleaning step would be BB-01: Product Cleaning - Solvent-Based, and the etching process would be BB-04: Removal by Chemical Means. This firm would report as shown below.

✓ Example 8: Production Units

01

a. Production Unit #

b. Describe the Process:

Cleaning and etching and jewelry

is this production unit IN USE for the reporting year of this submittal?

yes no

c. Describe the Product:

jewelry

Enter up to four (4) six-digit NAICS Codes that best describe the Product from this Production Unit:

339914

d. NAICS Code

e. NAICS Code

f. NAICS Code

g. NAICS Code

h. Check the appropriate description for the unit of product:

area dollar hours kilowatt length N/A number volume weight

✓ Example 8: Production Units (Con't)

Production Process Step Information For This Production Unit

i. Enter the production process codes to identify the process steps that involve TURA-reportable chemicals as an input, output or throughput. (See the reporting guidance document for the list of production process codes and instructions on when a given code needs to be listed.)

1. <u>BB-01</u> Process Code	2. <u>BB-04</u> Process Code	3. _____ Process Code	4. _____ Process Code
5. _____ Process Code	6. _____ Process Code	7. _____ Process Code	8. _____ Process Code
9. _____ Process Code	10. _____ Process Code	11. _____ Process Code	12. _____ Process Code
13. _____ Process Code	14. _____ Process Code	15. _____ Process Code	16. _____ Process Code
17. _____ Process Code	18. _____ Process Code	19. _____ Process Code	20. _____ Process Code
21. _____ Process Code	22. _____ Process Code	23. _____ Process Code	24. _____ Process Code

List the TURA-reportable chemicals associated with this production unit. If a chemical is associated with ALL the process steps entered in i. above, check ALL. If a chemical is associated with some but not all of the process steps, check the numbers that correspond to the process codes entered in i. above (i.e. box 1

j. Production unit number: 01
Prod. Unit #

k. TURA 79016 TRICHLOROETHYLENE
Chemica CAS # Chemical Name

Check "All" or the numbers that correspond to the process codes entered in i. All.

TURA Production Process Codes Listing by Process Type

Group 1: Processes Typically Used by Firms that Make and Process Objects or Provide Services

General Guide to Group 1 Process Codes: Codes with the prefix "AA" generally refer to processes that add coatings or other matter to a product. The "BB" codes refer to processes that remove matter from a product. The "CC" codes represent processes by which products are given form, shape, physical dimension or other physical properties.

PROCESS and PROCESS CODE	COMMENTS and EXAMPLES
Coating & Painting Processes	Note: firms that use extrusion to coat objects should use the Extruding/Drawing (CC-02)
AA-01: Dip, Flow & Curtain Coating	Example: processes where excess coating material is allowed to flow or drain off
AA-02: Spray Coating	Example: applying coating as a fine mist or spray Note, however, electrostatic spray coating is included under AA-04 rather than this code
AA-03: Knife/Spread/Roll Coating	Example: using a roller, doctor knife or brush to apply coating
AA-04: Electrostatic Coating Methods	Examples: electrostatic spray coating, electrostatic powder coating, electrocoating
Printing Processes	
AA-05: Letterpress & Flexographic	Example: ink applied to a raised surface of printing plate
AA-06: Lithographic	Example: ink adheres to hydrophobic area/fountain solution adheres to hydrophilic area Use this code to describe the lithographic processes used in semiconductor and printed circuit board manufacturing
AA-07: Gravure	Example: ink remains in recessed areas of the plate Includes gravure coating as well as printing

AA-08: Screen Printing	Example: ink forced through open or porous areas of screen or plate
AA-09: Pad Printing	Example: use of a silicone pad to transfer ink from etched/engraved plate to work piece
AA-10: Printing Using Carrier Films or Foils	Examples: hot stamping, in-mold decorating of plastics using films or foils
AA-11: Jet Printing	Example: use of jet(s) to apply text or a pattern
Plating Processes	
AA-12: Electroplating (Barrel) AA-13: Electroplating (Rack)	
AA-14: Electroless (Barrel) AA-15: Electroless (Rack)	
AA-16: Mechanical Plating	Example: coating a substrate by tumbling or other mechanical means, e.g., using metal powders
AA-17: Hot Dip Coating (of metal)	Examples: galvanizing, hot tin dipping
Processes that penetrate surface layer	
AA-18: Anodizing, Conversion Coating and Case Hardening (through diffusion)	Examples: anodizing, black oxide conversion, bright dipping, chromating, passivating, phosphating Includes case hardening through diffusion of substances in the surface layer of metal (e.g., nitriding, nitrocarburizing) For case hardening through the application of energy/heat, see CC-04
AA-19: Deposition	Examples: vacuum metallizing, sputtering, metal (flame) spraying
Processes that add material throughout the mass of a product	
AA-20: Pigmentation/Dyeing	
AA-21: Infiltration/Saturation	Example: kraft paper saturation
AA-22: Impregnation/Implantation	Examples: (from semiconductor industry) - doping (through diffusion), ion implantation, vacuum impregnation
Processes that remove material from product	

Product or Parts Cleaning	Removing dirt, grease and other foreign matter from product For drying that occurs as part of cleaning use BB-09
BB-01: Solvent-Based	
BB-02: Aqueous	Includes rinsing
BB-03: Mechanical	Examples: sand blasting, cleaning with saw dust
Removal of Mass from Substrate (excluding Cleaning)	
BB-04: Removal by Chemical Means	Includes bleaching (in textiles), chemical stripping, electropolishing, etching, pickling (of metals)
BB-05: Removal by Mechanical Means (<u>Gross Mass</u> Removal)	Includes processes that remove pieces or chips from product; can include cutting, drilling, lathing, turning
BB-06: Removal by Mechanical Means (<u>Fine Mass</u> Removal/Size Reduction)	Includes removal methods that produce fine particles/dust; can include abrasive blasting, grinding, milling, polishing (processes that smooth the surface without removing material should be reported as CC-06)
BB-07: Removal by Chemical and Mechanical Means	Example: (in paper making) pulping where mechanical and chemical processes are used
BB-08: Removal by Application of Heat or Energy	Example: laser cutting
BB-09: Drying NOS	Drying not otherwise specified; includes chemical drying
Product Molding/Forming	
CC-01: Casting/Molding	Includes all forms of casting, injection molding, blow molding and similar processes
CC-02: Extrusion/Drawing	Includes processes by which a product is given shape by pushing material through a die or similar device Firms that coat products by extrusion should use this code
CC-03: Forging	

CC-04: Heat Treating NOS	Examples: controlled heating of metal to increase or decrease hardness, improve machinability, relieve stresses etc. (annealing, austempering, tempering and case hardening)
CC-05: Quenching	Example: rapid cooling after heat treating through contact with liquids, gases or solids
CC-06: Forming by Mechanical Means NOS	Forming by Mechanical Means not otherwise specified Examples: bending, cold heading, embossing, rolling
Bonding/Joining	
CC-07: Application of Adhesives	
CC-08: Soldering/Brazing	
CC-09: Welding	
CC-10: Sintering/Powder Metallurgy	
CC-11: Joining through Application of Heat/Energy NOS	Joining through Application of Heat/Energy not otherwise specified
CC-12: Joining through Chemical Means NOS	Joining through Chemical Means not otherwise specified
CC-13: Joining through Mechanical Means NOS	Joining through Mechanical Means not otherwise specified Examples: cladding

Group 2: Production Processes Typically Used by Firms that Manufacture and Process Chemicals

PROCESS and PROCESS CODE	COMMENTS and EXAMPLES
SEPARATION/REFINING	
DD-01: Centrifuge/Filtration	
DD-02: Distillation	
DD-03: Drying	
DD-04: Extraction	
DD-05: Precipitation	
DD-06: Refining/Purification	
DD-07: Smelting	
CHEMICAL REACTIONS	
EE-01: Acetalization	
EE-02: Condensation	
EE-03: Curing, Vulcanizing, Cross Linking	
EE-04: Dehydrogenation	
EE-05: Esterification	
EE-06: Hydrogenation	
EE-07: Oxidation/Reduction	
EE-08: pH Adjust	
EE-09: Polymerization	
EE-10: Substitution Reactions	Includes halogenization and chlorination
EE-11: Chemical Reactions NOS	Chemical Reactions not otherwise specified

Group 3: Miscellaneous Processes that could be used by any firm

PROCESS and PROCESS CODE	COMMENTS and EXAMPLES
Production Equipment Cleaning	Examples: cleaning of vessels, process lines, printing plates, such devices as spray guns. Also includes descaling of boilers NOTE: Equipment cleaning includes SANITIZING
FF-01: Solvent-Based	
FF-02: Aqueous	Example: use of caustic solutions to clean production equipment
FF-03: Mechanical	Example: use of wiper blades, squeegees
Materials Storage/Handling	
GG-01: Blending, Mixing, Compounding	
GG-02: Particle Size Reduction	Example: grinding mills
GG-03: Packaging/Filling	Examples: bottling liquid products, repackaging
GG-04: Materials Storage/Handling NOS	Materials Storage Handling not otherwise specified Use for storage and handling processes that generate losses such as spills or evaporative losses
Treatment of Process Water	
HH-01: Deionization, Demineralization	Examples: deionization, water softening, including associated process like regeneration of deionization resins
HH-02: Use of Biocides/Disinfection	Examples: water chlorination, use of algaecides in cooling towers
HH-03: pH Control of Process Water NOS	pH Control of Process Water (including water in boilers), not otherwise specified
Refrigeration/Temperature Control	
II-01: Refrigeration	
II-02: Heat Exchange Unit	
II-03: Contact Cooling NOS	Contact Cooling not otherwise specified Do not use for quenching. Quenching is CC-05

II-04: Noncontact Cooling NOS	Noncontact Cooling not otherwise specified
Power Generation	
JJ-01: Production of Electricity, Steam, Facility Heat	Applies to processes producing electricity, steam or heat through combustion, includes co-generation Note: use an FF code for equipment cleaning associated with power production and a HH code for treatment of cooling or boiler water

TURA Production Process Codes: Alphabetized Listing of Group 1 and 3

MassDEP has prepared the following alphabetical listing of some of the more commonly reported production processes with cross-references to the recommended codes listed above. This appendix explains how to use generic codes to report on production processes in the Form S Cover Sheet. The alphabetical list covers selected processes from Groups 1 and 3 of the codes listed in “TUR Production Process Codes by Process Type” above.⁶ (Firms that are primarily in the chemical manufacturing NAICS codes should also refer to the Group 2 codes. The processes associated with chemical manufacturing are not included in this alphabetical list.)

“TUR Production Process Codes by Process Type” should also be consulted to confirm the applicability of a code. While the appendix and this list are intended to provide guidance, each filer is encouraged to use his or her best judgment concerning which code(s) adequately describes its processes.

IMPORTANT NOTE ON THE "MOST LIKE" AND "NOT OTHERWISE SPECIFIED" CODING:

“TUR Production Process Codes by Process Type” divides the codes into subgroups, such as CC-01 through CC-06 for the product molding and forming codes. Some of the subgroups contain one or more codes containing the abbreviation "NOS" for "not otherwise specified."

Each NOS code is a default code for its group. For example, CC-06 (Forming by Mechanical Means NOS) should be used for any mechanical product forming process other than those specifically-named in its group (e.g., casting, molding, extrusion, etc.). The use of the "most like" coding method discussed above should only be used as a last resort, i.e., if there is no applicable code, NOS or otherwise.

⁶ TUR Production Process Codes by Process Type”divides the codes into three groups: Group 1 lists processes typically used by firms that primarily make or process objects (or provide services). Group 2 lists processes typically used by firms that are primarily in the chemical manufacturing SIC codes. Group 3 lists miscellaneous processes that might be used by any firm regardless of whether objects or chemicals are made/processed (or services provided).

ALPHABETICAL LISTING OF PRODUCTION PROCESSES

<u>Process Step</u>	<u>Cross-Reference / Comment</u>
abrasive blasting	<i>see codes listed below under "removal of mass from substrate"</i>
acid aging	see <u>AA-20</u> (Pigmentation/Dyeing), for acid aging as a step in dyeing
annealing	see <u>CC-04</u> (Heat Treating NOS)
anodizing	see <u>AA-18</u> (Anodizing, Conversion Coating & Case Hardening [through diffusion])
application of adhesives	see <u>CC-07</u> (Application of Adhesives - Bonding/Joining)
aqueous-based cleaning	see <u>FF-02</u> (Aqueous Cleaning of Production Equipment) of production equipment
aqueous-based cleaning	see <u>BB-02</u> (Aqueous Cleaning of Product or Parts) of work product
austempering	see <u>CC-04</u> (Heat Treating NOS)
bending	see <u>CC-06</u> (Forming by Mechanical Means NOS)
black oxide	see <u>AA-18</u> (Anodizing, Conversion Coating & Case Hardening conversion coating [through diffusion])
blanking	<i>see codes listed below under "removal of mass from substrate"</i>
bleaching	see <u>BB-04</u> (Removal by Chemical Means)
blending	see <u>GG-01</u> (Blending, Mixing, Compounding)
blow molding	see <u>CC-01</u> (Casting/Molding)
bonding/joining	see as appropriate: <u>CC-07</u> (Application of Adhesives) <u>CC-08</u> (Soldering/Brazing) <u>CC-09</u> (Welding) <u>CC-10</u> (Sintering/Powder Metallurgy) <u>CC-11</u> (Joining through Application of Heat/Energy NOS)

	<u>CC-12</u> (Joining through Chemical Means NOS) <u>CC-13</u> (Joining through Mechanical Means NOS)
boring	<i>see codes listed below under "removal of mass from substrate"</i>
bottling liquid products	see <u>GG-03</u> (Packaging/Filling)
brazing	see <u>CC-08</u> (Soldering/Brazing)
bright dipping	see <u>AA-18</u> (Anodizing, Conversion Coating & Case Hardening [through diffusion]) if bright dipping is intended to alter the chemical structure of the workpiece's surface see <u>BB-04</u> (Removal by Chemical Means) if bright dipping is intended to remove mass from the workpiece
broaching	<i>see codes listed below under "removal of mass from substrate"</i>
brush-on coating	see <u>AA-03</u> (Knife/Spread/Roll Coating)
buffing	see as appropriate: <u>CC-06</u> (Forming by Mechanical Means NOS), if the process is <u>not</u> intended to remove material from the work piece <i>codes listed below under "removal of mass from substrate,"</i> if the process is intended to remove material from the work piece
burnishing	see as appropriate: <u>CC-06</u> (Forming by Mechanical Means NOS), if the process is <u>not</u> intended to remove material from the work piece <i>codes listed below under "removal of mass from substrate,"</i> if the process is intended to remove material from the work piece
calendering	see <u>CC-06</u> (Forming by Mechanical Means NOS)
case hardening	see <u>AA-18</u> (Anodizing, Conversion Coating & Case Hardening [through diffusion]), includes processes such as nitriding

case hardening by heat treating	see <u>CC-04</u> (Heat Treating NOS)
casting	see <u>CC-01</u> (Casting/Molding)
chemical drying	see <u>BB-09</u> (Drying NOS), if chemical drying refers, for example, to the use solvents for drying a work product see <u>DD-03</u> (Drying) for chemical manufacturers that dry chemicals
chemical stripping	see <u>BB-04</u> (Removal by Chemical
chromating	see <u>AA-18</u> (Anodizing, Conversion Coating & Case Hardening [through diffusion])
cladding	see <u>CC-13</u> (Joining through Mechanical Means (NOS) leaning of production equipment see as appropriate: <u>FF-01</u> (Solvent-Based Cleaning of Production Equipment) <u>FF-02</u> (Aqueous Cleaning of Production Equipment) <u>FF-03</u> (Mechanical Cleaning of Production Equipment) cleaning of work product see as appropriate: <u>BB-01</u> (Solvent-Based Cleaning of Product or Parts) <u>BB-02</u> (Aqueous Cleaning of Product or Parts) <u>BB-03</u> (Mechanical Cleaning of Product or Parts)
co-extrusion	see <u>CC-02</u> (Extrusion/Drawing)
co-generation	see <u>JJ-01</u> (Production of Electricity, Steam, Facility Heat)
cold heading	see <u>CC-06</u> (Forming by Mechanical Means NOS)
compounding	see <u>GG-01</u> (Blending, Mixing, Compounding
contact cooling	see <u>II-03</u> (Contact Cooling NOS) or quenching, however, use <u>CC-05</u> (Quenching)
conversion coating	see <u>AA-18</u> (Anodizing, Conversion Coating & Case Hardening [through diffusion])
conveyorized degreasing	<i>see codes listed above under "cleaning of work product"</i>
crystal growth	see <u>AA-19</u> (Deposition)

curtain coating	see <u>AA-01</u> (Dip, Flow & Curtain Coating)
cutting	<i>see codes listed below under "removal of mass from substrate"</i>
deburring	<i>see codes listed below under "removal of mass from substrate"</i>
degreasing	<i>see codes listed above under "cleaning of work product"</i>
deionization	see <u>HH-01</u> (Deionization, Demineralization), includes the regeneration of deionization resins (of process water)
demineralization	see <u>HH-01</u> (Deionization, Demineralization)
deposition	see <u>AA-19</u> (Deposition) use this code for processes that in deposit thin films (usually of metal) and for crystal growth (includes metal [flame] spraying, sputtering, vacuum metallizing)
descaling of boilers	<i>see codes listed above under "cleaning of production equipment"</i>
descaling of work product	<i>see codes listed below under "removal of mass from substrate"</i>
desmutting	<i>see codes listed below under "removal of mass from substrate"</i>
dip coating	see <u>AA-01</u> (Dip, Flow & Curtain Coating)
disinfection	see <u>HH-02</u> (Treatment of Process Water: Use of of process water Biocides/Disinfection)
doping (through diffusion)	see <u>AA-22</u> (Impregnation/Implantation)
drawing	see <u>CC-02</u> (Extrusion/Drawing)
drilling	<i>see codes listed below under "removal of mass from substrate"</i>
dry cleaning (of clothes)	<i>see codes listed above under "cleaning of work product"</i>
drying (of work product)	see <u>BB-09</u> (Drying NOS)
dyeing	see <u>AA-20</u> (Pigmentation/Dyeing)

electric power generation	see <u>JJ-01</u> (Production of Electricity, Steam, Facility Heat)
electrocoating	see <u>AA-04</u> (Electrostatic Coating Methods)
electroless plating (barrel)	see <u>AA-14</u> (Electroless Plating [Barrel])
electroless plating (rack)	see <u>AA-15</u> (Electroless Plating [Rack])
electroplating (barrel)	see <u>AA-12</u> (Electroplating [Barrel])
electroplating (rack)	see <u>AA-13</u> (Electroplating [Rack])
electropolishing	see <u>BB-04</u> (Removal by Chemical Means)
electrostatic coating methods	see <u>AA-04</u> (Electrostatic Coating Methods)
electrostatic powder coating	see <u>AA-04</u> (Electrostatic Coating Methods)
electrostatic spray coating	see <u>AA-04</u> (Electrostatic Coating Methods)
embossing	see <u>CC-06</u> (Forming by Mechanical Means NOS)
equipment cleaning	<i>see codes listed above under "cleaning of production equipment"</i>
etching	see <u>BB-04</u> (Removal by Chemical Means)
extrusion	see <u>CC-02</u> (Extrusion/Drawing)
filling	see <u>GG-03</u> (Packaging/Filling)
flame and arc cutting	see <u>BB-08</u> (Removal by Application of Heat or Energy)
flexographic printing	see <u>AA-05</u> (Letterpress & Flexographic Printing)
flow coating	see <u>AA-01</u> (Dip, Flow & Curtain Coating)
foam molding	see <u>CC-01</u> (Casting/Molding)
forging	see <u>CC-03</u> (Forging)
forming by mechanical means NOS	see <u>CC-06</u> (Forming by Mechanical Means NOS) mechanical forming processes other than casting/molding (CC-01), extrusion/drawing (CC-02) or forging (CC-03)

galvanizing	see as appropriate: <u>AA-17</u> (Hot Dip Coating of Metal) <u>AA-12</u> (Electroplating, Barrel) & <u>AA-13</u> (Electroplating, Rack), if galvanizing is by electroplating
gravure printing gravure coating	see <u>AA-07</u> (Gravure) see <u>AA-07</u> (Gravure)
grinding	see as appropriate: <i>codes listed below under "removal of mass from substrate"</i> <u>GG-02</u> (Particle Size Reduction) for grinding of chemicals, as in grinding of paint pigments
heat exchange unit	see <u>II-02</u> (Heat Exchange Unit)
heat treating	see <u>CC-04</u> (Heat Treating NOS)
hobbing	<i>see codes listed below under "removal of mass from substrate"</i>
hot dip coating (of metal)	see <u>AA-17</u> (Hot Dip Coating of Metal)
hot stamping	see <u>AA-10</u> (Printing Using Carrier Films or Foils) (printing)
hot tin dipping	see <u>AA-17</u> (Hot Dip Coating of Metal)
implantation	see <u>AA-22</u> (Impregnation/Implantation)
impregnation	see <u>AA-22</u> (Impregnation/Implantation)
in-mold decorating of plastics	see <u>AA-10</u> (Printing Using Carrier Films or Foils) using films or foils
infiltration	see <u>AA-21</u> (Infiltration/Saturation)
injection molding	see <u>CC-01</u> (Casting/Molding)
ion implantation	see <u>AA-22</u> (Impregnation/Implantation)
jet printing	see <u>AA-11</u> (Jet Printing)

knife coating	see <u>AA-03</u> (Knife/Spread/Roll Coating)
knife over roll coating	see <u>AA-03</u> (Knife/Spread/Roll Coating)
kraft paper saturation	see <u>AA-21</u> (Infiltration/Saturation)
laser cutting	see <u>BB-08</u> (Removal by Application of Heat or Energy)
lathing	<i>see codes listed below under "removal of mass from substrate"</i>
letterpress printing	see <u>AA-05</u> (Letterpress & Flexographic Printing)
lithographic printing	see <u>AA-06</u> (Lithographic)
machining	<i>see codes listed below under "removal of mass from substrate"</i>
materials storage/handling	see as appropriate: <u>GG-01</u> (Blending, Mixing, Compounding) <u>GG-02</u> (Particle Size Reduction) <u>GG-03</u> (Packaging/Filling) <u>GG-04</u> (Materials Storage Handling NOS)
mechanical plating	see <u>AA-16</u> (Mechanical Plating)
metal (flame) spraying	see <u>AA-19</u> (Deposition)
milling	see as appropriate: <i>codes listed below under "removal of mass from substrate"</i> <u>GG-02</u> (Particle Size Reduction) as in the use of grinding mills
mixing	see <u>GG-01</u> (Blending, Mixing, Compounding)
molding	see <u>CC-01</u> (Casting/Molding)
neutralization	if neutralization is a step in a coded process, use that code for that process, for example, if neutralization is a step in dyeing, the appropriate code would be <u>AA-20</u> (Pigmentation/Dyeing)
use <u>EE-08</u>	if neutralization is used in the manufacture of a chemical, (pH Adjust)

nitriding	see <u>AA-18</u> (Anodizing, Conversion Coating & Case Hardening [through diffusion])
nitrocarburizing	see <u>AA-18</u> (Anodizing, Conversion Coating & Case Hardening [through diffusion])
noncontact cooling	see <u>II-04</u> (Noncontact Cooling NOS) (where cooling fluid is kept separate from the production process)
packaging	see <u>GG-03</u> (Packaging/Filling)
pad printing	see <u>AA-09</u> (Pad Printing)
particle size reduction	see <u>GG-02</u> (Particle Size Reduction), for processes such as the grinding of paint pigments
passivating	see <u>AA-18</u> (Anodizing, Conversion Coating & Case Hardening [through diffusion])
pH control	see <u>HH-03</u> (pH Control of Process Water [including water in of process water boilers] NOS)
photolithography	see <u>AA-06</u> (Lithographic)
phosphatizing	see <u>AA-18</u> (Anodizing, Conversion Coating & Case Hardening [through diffusion])
pickling (of metals)	see <u>BB-04</u> (Removal by Chemical Means)
pigmentation	see <u>AA-20</u> (Pigmentation/Dyeing)
polishing	<i>codes listed below under "removal of mass from substrate," if material is removed from work piece</i>
polishing (continued)	<u>CC-06</u> (Forming by Mechanical Means NOS) if material is <u>not</u> removed from work piece
powder metallurgy	see <u>CC-10</u> (Sintering/Powder Metallurgy)
pressure treating (wood)	see <u>AA-22</u> (Impregnation/Implantation)
printing using	see <u>AA-10</u> (Printing Using Carrier or Filmcarrier films or Foils)

NOTE: some mechanical "removal" processes (e.g., polishing) can be used either to remove material or to smooth the surface of a product without removing material. The

code for such mechanical surface "smoothing" is CC-06 (Forming by Mechanical Means NOS).

pulping (in paper making) see as appropriate:

BB-05 (Removal by Mechanical Means - Gross Mass Removal)

BB-06 (Removal by Mechanical Means - Fine Mass Removal)

BB-07 (Removal by Chemical & Mechanical Means)

punching *see codes listed below under "removal of mass from substrate"*

quenching see CC-05 (Quenching)

refrigeration see II-01 (Refrigeration)

regeneration of deionization resins see HH-01 (Deionization, Demineralization)

removal of mass from substrate refers to processes which can be used to a work product, generally, excluding the removal of dirt or grease cleaning as in removal

The six removal codes are:

BB-04 (Removal by Chemical Means)

BB-05 (Removal by Mechanical Means -- Gross Mass Removal), to be used if process removes pieces or chips

BB-06 (Removal by Mechanical Means -- Fine Mass Removal/ Size Reduction), to be used if process produces fine particles or dust

BB-07 (Removal by Chemical & Mechanical Means)

BB-08 (Removal by Application of Heat or Energy)

BB-09 (Drying NOS) for drying work products

repackaging see GG-03 (Packaging/Filling)

reverse roll coating/printing see AA-03 (Knife/Spread/Roll Coating)

rinsing	see <u>BB-02</u> (Aqueous Cleaning of Product or Parts)
roll coating	see <u>AA-03</u> (Knife/Spread/Roll Coating)
rolling	see <u>CC-06</u> (Forming by Mechanical Means NOS)
rotary screen printing	see <u>AA-08</u> (Screen Printing)
sand blasting	<i>see codes listed above under "removal of mass from substrate"</i>
sanitizing (production equipment)	<i>see codes listed above under "cleaning of production equipment"</i>
saturation	see <u>AA-21</u> (Infiltration/Saturation)
sawing	<i>see codes listed above under "removal of mass from substrate"</i>
semi-aqueous cleaning	see <u>BB-01</u> (Solvent-Based Cleaning of Product or of work product parts)
scouring (textile products)	<i>see codes listed above under "cleaning of work product"</i>
screen printing	see <u>AA-08</u> (Screen Printing)
shearing	<i>see codes listed above under "removal of mass from substrate"</i>
sintering	see <u>CC-10</u> (Sintering/Powder Metallurgy)
soldering	see <u>CC-08</u> (Soldering/Brazing)
solvent-based cleaning	see <u>FF-01</u> (Solvent-Based Production Equipment of production equipment Cleaning)
solvent-based cleaning	see <u>BB-01</u> (Solvent-Based Cleaning of Product or of work product Parts)
solvent drying	see <u>BB-09</u> (Drying NOS), for the use solvents to dry a product or work piece
spray coating	see <u>AA-02</u> (Spray Coating) (does not include electrostatic spray coating)

spray coating	see <u>AA-04</u> (Electrostatic Coating Methods) for electrostatic
spread coating	see <u>AA-03</u> (Knife/Spread/Roll Coating)
sputtering	see <u>AA-19</u> (Deposition)
steam generation via combustion	see <u>JJ-01</u> (Production of Electricity, Steam, Facility Heat)
straightening	see <u>CC-06</u> (Forming by Mechanical Means NOS)
tempering	see <u>CC-04</u> (Heat Treating NOS)
trimming	<i>see codes listed above under "removal of mass from substrate"</i>
tumbling	see as appropriate: <u>AA-16</u> (Mechanical Plating), if tumbling is used to plate <i>codes listed above under "removal of mass from substrate,"</i> if tumbling is used to remove mass from a work product, such as tumbling to deburr <u>CC-06</u> (Forming by Mechanical Means NOS), if tumbling is used to smooth a work product without removing mass turning <i>see codes listed above under "removal of mass from substrate"</i>
ultrasonic cleaning of parts	<i>see codes listed above under "cleaning of work product"</i>
use of biocides	see <u>HH-02</u> (Treatment of Process Water: Use of in process water/cooling towers Biocides/Disinfection)
use of squeegees/wiper blades/rags	<i>see codes listed above under "cleaning of production equipment" to clean production equipment</i>
vacuum impregnation	see <u>AA-22</u> (Impregnation/Implantation)
vacuum metallizing	see <u>AA-19</u> (Deposition)
vapor degreasing	<i>see codes listed above under "cleaning of work product"</i>
water deionization	see <u>HH-01</u> (Deionization, Demineralization)
water chlorination Biocides/Disinfection	see <u>HH-02</u> (Treatment of Process Water: Use of

water softening see HH-01 (Deionization, Demineralization)

welding see CC-09 (Welding)

Appendix I: Production Units

The Form S contains both facility-wide and process-specific information. Facilities report information on the quantity of chemical used and the amount generated as byproduct (waste) on a facility-wide level. Any progress in reducing byproduct through the implementation of toxics use reduction is measured and reported at the process (or "production unit") level.

A **production unit** is "a process, line, method, activity, or techniques, or a combination or series thereof, used to produce a product or a family of products."

A **product** means "a product, family of products, an intermediate product, a family of intermediate products, or a desired result or family of results."

A **result** is, for example, clean laundry after an industrial cleaning process.

A **family of products** is, for example, three different rubber compounds grouped together as one product.

Intermediate product is, for example: A chemical manufacturer produces methanol as an intermediate step in the production of formaldehyde. The methanol can be considered a product.

With these definitions TURA gives facilities flexibility in how they divide their facility into production units:

- A production unit can include all of the processes used to produce an individual item such as a particular shade of paint or a plated knife, or that produce a desired result such as cleaned out lines and mixing vats.
 - Products can be grouped together into a family of products so that, for instance, all of the processes used to create several different shades of paint could be considered one production unit.
 - An individual process step such as degreasing coupled with the result of that step (for example, a degreased piece of metal), can be considered a separate production unit.
 - Separate process lines that make the same product can be considered as one production unit.
- For guidance on factors that should be considered when establishing production units, please refer to MassDEP's "Guidelines for Classifying Production Units". This can be obtained on the MassDEP web site at: <https://www.mass.gov/media/1784276>.

In addition to identifying production units, facilities must also establish a "unit of product." There are two basic explanations for a decline in the quantity of chemical generated as byproduct: There could have been a drop in production levels, or, through the implementation of TUR, less byproduct could have been generated per unit of product produced.

In order to distinguish byproduct reductions that occur through declines in production from those that occur because of the implementation of TUR, production level reporting is done on a "per unit of product" basis.

As with production units, facilities are free to select the unit of product. The key to choosing a unit of product is that the measure should be a reliable indicator of changes in production levels. The unit of product should be one that reliably increases or decreases as production goes up or down. The Guidelines for Classifying Production Units discusses considerations for selecting a unit of product.

In most cases, an acceptable choice will be a physical measure such as pounds of ammonia manufactured by the production unit or square yards of printed fabric.

✓ Example

Example	Units of Product
No. of Products/year	No. of wood chairs
Square feet/year	square feet of anodized parts
Pounds/year	pounds of formaldehyde produced
Gallons/year	gallons of paint produced

Sometimes, however, it may not be possible to identify a physical measure that reliably reflects outputs. In such a case, a non-physical measure may be used as a way to quantify changes in production. Examples of this may include: hours of operation, labor hours, and dollar sales.

Non-physical measures can be affected by things that have nothing to do with changing levels of production. For instance, dollar sales will be influenced by changes in inflation, or perhaps, by product pricing. Labor hours might be less reliable if there has been a mid-year shift to automation, making output more efficient.

If you chose a non-physical unit of product, you must provide a written explanation as to why a physical measure cannot be used. You must also state how the non-physical measure has been adjusted to accurately reflect production levels rather than changes in costs, prices, inventory, productivity or other factors.

Appendix J: Glossary of Terms

Alloy: a substance possessing metallic properties and composed of two or more elements of which at least one must be a metal. The term refers to those cases where there is an intentional addition to a metal for the purpose of improving certain properties.

Byproduct: Nonproduct outputs of toxic or hazardous substances generated by a production unit, before handling, transfer, treatment or release. Otherwise used substances shall be counted as byproduct when they leave a production unit.

CERCLA: Comprehensive Environmental Response, Compensation, and Liability Act, commonly referred to as “Superfund.”

EPCRA: Emergency Planning and Community Right to Know Act.

Facility: all buildings, equipment, structures, and other stationary items which are located on a single site or on contiguous or adjacent sites and which are owned or operated by the same person, or by any person who controls, is controlled by, or is under common control with such person.

Full-Time Employee Equivalent: An FTE is defined as 2,000 work hours per year. The 10 FTE criteria is met if a total of 20,000 hours were worked by all employees (including consultants) whether they worked full or part-time.

☞ **Note**: repackaging the chemical is considered processing.

Higher Hazard Substance: means a substance designated by the Council as a higher hazard substance pursuant to M.G.L. c. 21I, § 9 and 301 CMR 41.00.

Included NAICS/SIC Codes: This is one of the areas where TURA’s requirements differ from those of EPCRA.

Under TURA, the NAICS/SIC code criteria is met if any of your business activities are conducted in the areas represented by TURA’s longer list of included NAICS/SIC codes. The TURA list includes manufacturing plus business activities such as transportation, wholesale trade, and business or personal services.

EPCRA reporting is only required of firms that derive more than 50% of their business from **manufacturing**. For the descriptions of the NAICS/SIC codes, see Appendix A.

Lower Hazard Substance: means a substance designated by the Council as a lower hazard substance pursuant to M.G.L. c. 21I, § 9 and 301 CMR 41.00.

Manufacture: to produce, prepare, import or compound a toxic or hazardous substance. Manufacture shall also mean to produce a toxic or hazardous substance coincidentally during the manufacture, processing, use, or disposal of another substance that is

separated from that other substance or mixture of substances as a byproduct, and a toxic substance that remains in that other substance or mixture of substances as an impurity.

Otherwise Use: EPA has revised its definition of OTHERWISE USE to mean ‘any use of a toxic chemical, including a toxic chemical contained in a mixture or other trade name product or waste, that is not covered in the terms “manufacture” or “process.” Otherwise use of a toxic chemical does not include disposal, stabilization (without subsequent distribution in commerce), or treatment for destruction unless:

A. The toxic chemical that was disposed, stabilized, or treated for destruction was received from off-site for the purposes of further waste management; or

B. The toxic chemical that was disposed, stabilized, or treated for destruction was manufactured as a result of waste management activities on materials received from off-site for the purposes of further waste management activities. Relabeling or redistributing of the toxic chemical where no repackaging of the toxic chemical occurs does not constitute otherwise use or processing the toxic chemical.

Process: the preparation of a toxic or hazardous substance, including, without limitation, a toxic substance contained in a mixture or trade name product, after its manufacture, for distribution in commerce:

- ❑ in the same form or physical state, or in a different form or physical state from that in which it was received by the toxic user preparing such substance; or
- ❑ as part of an article containing the toxic or hazardous substance.

Product: a product, a family of products, an intermediate product, family of intermediate products, or a desired result or a family of results. “Product” also means a byproduct that is used as a raw material without treatment.

Sanitized vs. Unsanitized Reports: If you make a Trade Secret claim, you must submit two versions of your report -- one that contains the Trade Secret information (**unsanitized**) and one that does not (**sanitized**). In Item g. in Section 1 of the Form S Cover Sheet, indicate whether the version of the report is sanitized or unsanitized.

Shipped in or as Product: the quantity of the chemical that leaves the facility as product.
